TERMS OF USE AND DISCLAIMERS

1. Authorised Use and Scope of Use

Note the name "Galileo" shall mean the system established under the Galileo programme.

The European GNSS (Galileo) Open Service Signal In Space Interface Control Document Issue 1 (hereinafter referred to as OS SIS ICD) and the information contained herein is made available to the public by the European Union (hereinafter referred to as Publishing Authority) for information, standardization, research and development and commercial purposes for the benefit and the promotion of the European Global Navigation Satellite Systems programmes (European GNSS Programmes) and according to terms and conditions specified thereafter.

2. General Disclaimer of Liability as to Use

With respect to the OS SIS ICD and any information contained in the OS SIS ICD, neither the Publishing Authority nor the copyright holders nor the generator of such information make any warranty, express or implied, including the warranty of fitness for a particular purpose, or assumes any legal liability or responsibility for the accuracy, completeness, or usefulness of any information hereby disclosed or for any product developed based on this information, or represents that the use of this information would not cause damages or would not infringe any intellectual property rights. No liability is hereby assumed for any direct, indirect, incidental, special or consequential damages, including but not limited to, damages for interruption of business, loss of profits, goodwill or other intangible losses, resulting from the use of the OS SIS ICD or of the information contained herein. Liability is excluded as well for consequences of the use and / or abuse of the OS SIS ICD or the information contained herein.

3. Disclaimers as to Intellectual Property Rights

The information contained in the OS SIS ICD, including its Annexes, is subject to intellectual property rights (hereinafter referred to as IPR).

Copyright

The OS SIS ICD is protected by copyright. Any alteration or translation in any language of the OS SIS ICD as a whole or parts of it is prohibited unless the Publishing Authority provides a specific written prior permission. The OS SIS ICD may only be partly or wholly reproduced and/or transmitted to a third party for non profit purposes, in accordance with the herein described permitted use and under following condition:

- the present "Terms of Use and Disclaimers" are accepted, reproduced and transmitted entirely and unmodified together with the reproduced and/or transmitted information;

IPR licence for research and development, including standardization purposes

The use of the information contained in the OS SIS ICD, including the spreading codes which are subject to IPR, is hereby allowed for research and development and/or standardisation purposes according to the terms and conditions of the license agreement attached hereto as Annex D.

Such licences will be provided on a non-discriminatory, basis in accordance with European Union rules and international commitments taken within the framework of the European GNSS Programmes.

Any interested party should contact: oss-icd[AT]ec.europa.eu

IPR licence for commercial use

The use of the information contained in the OS SIS ICD, including the spreading codes which are subject to IPR, is hereby allowed for manufacturing, distribution, commercialisation, sale of electronic devices (e.g. chipsets and receivers) and supply of Value Added Services according to the terms and conditions of the license agreement attached hereto as Annex E.

Such licences will be provided on a non-discriminatory, basis in accordance with European Union rules and international commitments taken within the framework of the European GNSS Programmes.

Any interested party should contact: oss-icd[AT]ec.europa.eu

4. Miscellaneous

The publication or provision of the OS SIS ICD or the information contained herein shall not be construed as granting any implied IPR licence.

No failure or delay in exercising any right in relation to the OS SIS ICD or the information contained therein shall operate as a waiver thereof, nor shall any single or partial exercise preclude any other or further exercise of such rights.

The disclaimers contained in this document apply to the extent permitted by applicable law.

5. Updates

The OS SIS ICD in its current version could be subject to modification, update, and variations.

The publication of updates will be subject to the same terms as stated herein unless otherwise evidenced.

Although the Publishing Authority will deploy its efforts to give notice to the public for further updates of OS SIS ICD, it does not assume any obligation to advise on further developments and updates of the OS SIS ICD, nor to take into account any inputs, comments proposed by interested persons or entities, involved in the updating process.

Document Change Record

Reason for change	Issue	Revision	Date
First issue	Draft	0	19/05/2006
CBOC Modulation added, 'lossless atmosphere' assumption removed from Tx power definition (issue under study), SAR data, update of the bit allocations of some F/NAV and I/NAV pages, editorial corrections etc.	Draft	1	14/02/2008
Update of the 'Terms of Use and Disclaimers' section and namely the licensing policy for R&D and standardization purposes as well as commercial purposes. Assignment of the primary and secondary codes to satellites in section in section 3.6. More details on the I/NAV alert page content in section 4.3.2.3. Clarification of the power sharing between the different Galileo signal components in section 2.7.1. Addition of Galileo E1 subcarriers plots in section 2.3.3 Clarification that Galileo E5a and E5b signals can be processed as QPSK signals in section 2.3.1.2. Update of the acronym list with QPSK in annex A. In section 4.2.4, for Page Type 6, parameter 'i' has been replaced by ω, the argument of perigee. In section 5.1.2, Time of Week an entire week from 0 to 604799 seconds, not up to 604800.	Issue 1	0	February 2010

List of Tables

1. Introduction

1.1. Document Scope

The name "Galileo" shall mean the system established under the Galileo programme.

The present European GNSS (Galileo) Open Service Signal In Space Interface Control Document (OS SIS ICD) Issue 1 contains the publicly available information on the Galileo Signal In Space. It is intended for use by the Galileo user community and it specifies the interface between the Galileo Space Segment, and the Galileo User Segment. The present document is subject to evolution, and the information contained in it may change. It is therefore recommended that a reconfigurable approach for the Galileo receivers be adopted by the manufacturers, in order to easily adapt the receivers' architecture to the possible changes which might occur in the future.

1.2. Document Overview

The present document is organised as follows:

- Chapter 1 is this introduction which provides the scope of the document and an overview of the Galileo system
- Chapter 2 provides the signal-in-space radio frequency characteristics
- Chapter 3 provides the characteristics of the spreading codes
- Chapter 4 provides the message structures
- Chapter 5 provides the characteristics of the navigation message data contents

1.3. Galileo System Overview

Galileo is the European global navigation satellite system providing a highly accurate, guaranteed and global positioning service under civilian control. It is inter-operable with GPS and GLONASS, the two other current global satellite navigation systems.

The fully deployed Galileo system consists of 30 satellites (27 operational and 3 spares), positioned in three circular Medium Earth Orbit planes at a nominal average orbit semi-major axis of 29601.297 Km, and at an inclination of the orbital planes of 56 degrees with reference to the equatorial plane.

Galileo provides enhanced distress localisation and call features for the provision of a Search and Rescue (SAR) service interoperable with the COSPAS-SARSAT system.

Figure 1 specifies the radio-frequency air interface between the space and user segments. Three independent CDMA signals, named E5, E6 and E1, are permanently transmitted by all Galileo satellites. The E5 signal is further sub-divided into two signals denoted E5a and E5b.
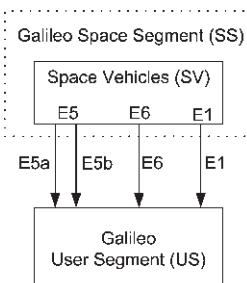

Figure 1.   Space Vehicle/Navigation User Interface

2. Galileo Signal Characteristics

2.1. Frequency Plan

2.1.1. Frequency Bands

The Galileo navigation Signals are transmitted in the four frequency bands indicated in Figure 2. These four frequency bands are the E5a, E5b, E6 and E1 bands. They provide a wide bandwidth for the transmission of the Galileo Signals.
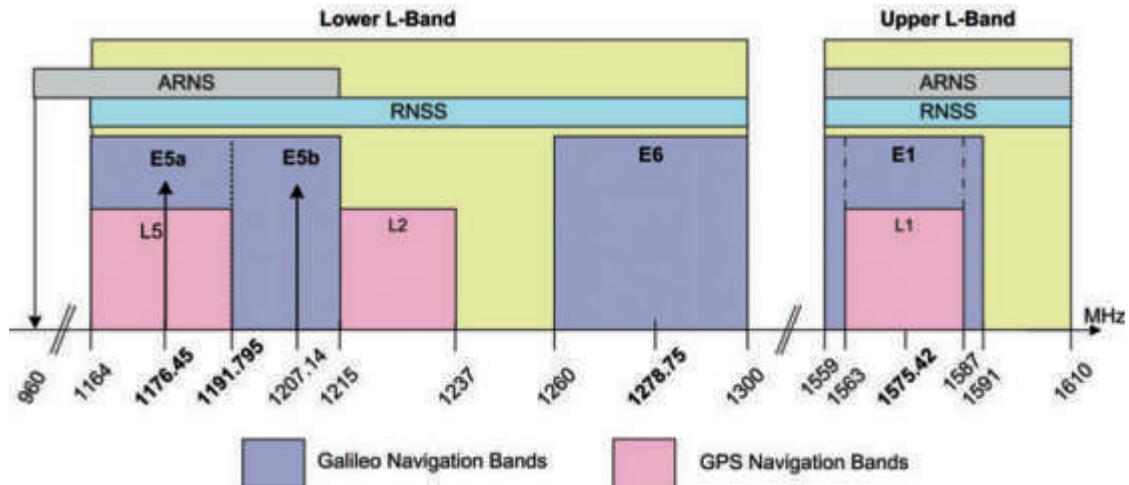

Figure 2. Galileo Frequency Plan

The Galileo frequency bands have been selected in the allocated spectrum for Radio Navigation Satellite Services (RNSS) and in addition to that, E5a, E5b and E1 bands are included in the allocated spectrum for Aeronautical Radio Navigation Services (ARNS), employed by Civil-Aviation users, and allowing dedicated safety-critical applications.

2.1.2. Carrier Frequencies

Galileo carrier frequencies are shown in Table 1. The names of the Galileo signals are the same than the corresponding carrier frequencies. Note that E5a and E5b signals are part of the E5 signal in its full bandwidth.

Signal	Carrier Frequency (MHz)
E1	1575.420
E6	1278.750
E5	1191.795
E5a	1176.450
E5b	1207.140

Table 1. Carrier Frequency per Signal

2.1.3. Receiver Reference Bandwidths

The receiver reference bandwidths centred on the carrier frequencies of Table 1 are specified in Table 2. Those reference bandwidths are considered when computing the correlation losses provided in paragraph 2.8.

Signal	Receiver Reference Bandwidth (MHz)
E1	24.552
E6	40.920
E5	51.150
E5a	20.460
E5b	20.460

Table 2.   Galileo Signals Receiver Reference Bandwidths

2.2. Signal Polarization

The transmitted signals are Right-Hand Circularly Polarized (RHCP).

2.3. Modulation

In the following sections, modulation expressions are given for the power normalized complex envelope (i.e. base-band version) sX(t) of a modulated (band-pass) signal SX(t). Both are described in terms of their in-phase sX-I(t) and quadrature sX-Q(t) components by the following generic expressions in Eq. 1.

$$S_X(t) = \sqrt{2P_X}\left[s_{X-I}(t)\cos(2\pi f_X t) - s_{X-Q}(t)\sin(2\pi f_X t)\right]$$

$$s_X(t) = s_{X-I}(t) + j\,s_{X-Q}(t)$$

Eq. 1

Table 3 defines the signal parameters used in this chapter, with the indices:

- 'X' accounting for the respective carrier (E5, E5a, E5b, E6 or E1) and
- 'Y' accounting for the respective signal component (B, C, I or Q) within the signal 'X'.

Parameter	Explanation	Unit
f_X	Carrier frequency	Hz
P_X	RF-Signal power	W
L_{X-Y}	Ranging code repetition period	chips
$T_{C,X-Y}$	Ranging code chip length	s
$T_{S,X}$	Sub-carrier period	s
$T_{S,X-Y}$	Subcarrier period	s
$T_{D,X-Y}$	Navigation message symbol duration	s
$R_{C,X-Y}$	$= 1/T_{C,X-Y}$ code chip rate	Hz
$R_{S,X}$	$= 1/T_{S,X}$ sub-carrier frequency	Hz
$R_{S,X-Y}$	$= 1/T_{S,X-Y}$ subcarrier frequency	Hz
$R_{D,X-Y}$	$= 1/T_{D,X-Y}$ navigation message symbol rate	Hz
$S_X(t)$	Signal pass-band representation	N/A
$C_{X-Y}(t)$	Binary (NRZ modulated) ranging code	N/A
$D_{X-Y}(t)$	Binary (NRZ modulated) navigation message signal	N/A

Parameter	Explanation	Unit
$sc_{X\text{-}Y}(t)$	Binary (NRZ modulated) subcarrier	N/A
$e_{X\text{-}Y}(t)$	Binary NRZ modulated navigation signal component including code, sub-carrier (if available) and navigation message data (if available); ($= c_{X\text{-}Y}(t)\ sc_{X\text{-}Y}(t)\ D_{X\text{-}Y}(t)$)	N/A
$s_X(t)$	Normalised (unit mean power) baseband signal $= s_{X\text{-}I}(t) + j\ s_{X\text{-}Q}(t)$	N/A
$c_{X\text{-}Y,k}$	kth chip of the ranging code	N/A
$d_{X\text{-}Y,k}$	kth symbol of the navigation message	N/A
$DC_{X\text{-}Y}$	$= T_{D,X}{}^Y / T_{C,X}{}^Y$ number of code chips per symbol	N/A
$\lvert i \rvert_L$	i modulo L	N/A
$[i]_{DC}$	Integer part of i/DC	N/A
$rect_T(t)$	Function "rectangle" which is equal to 1 for $0<t<T$ and equal to 0 elsewhere	N/A

Table 3.   Signal Description Parameters

2.3.1. E5 Signal

2.3.1.1. Modulation Scheme

The diagram in Figure 3 provides a generic view of the E5 signal AltBOC modulation generation.
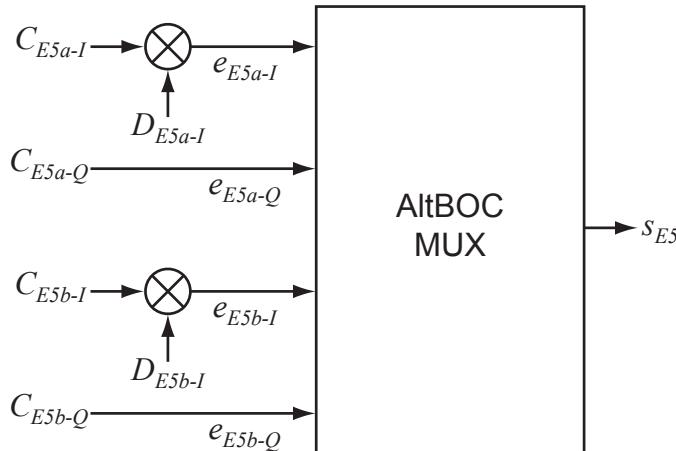

Figure 3.   Modulation Scheme for the E5 Signal

The E5 signal components are generated according to the following:

- $e_{E5a\text{-}I}$ from the F/NAV navigation data stream $D_{E5a\text{-}I}$ modulated with the unencrypted ranging code $C_{E5a\text{-}I}$

- $e_{E5a\text{-}Q}$ (pilot component) from the unencrypted ranging code $C_{E5a\text{-}Q}$

- $e_{E5b\text{-}I}$ from the I/NAV navigation data stream $D_{E5b\text{-}I}$ modulated with the unencrypted ranging code $C_{E5b\text{-}I}$

- $e_{E5b\text{-}Q}$ (pilot component) from the unencrypted ranging code $C_{E5b\text{-}Q}$

The respective definitions are following (Eq. 2):

$$e_{E5a-I}(t) = \sum_{i=-\infty}^{+\infty} \left[c_{E5a-I,|i|_{L_{E5a-I}}} \, d_{E5a-I,[i]_{DC_{E5a-I}}} \, rect_{T_{C,E5a-I}}\left(t - i\,T_{C,E5a-I}\right) \right]$$

$$e_{E5a-Q}(t) = \sum_{i=-\infty}^{+\infty} \left[c_{E5a-Q,|i|_{L_{E5a-Q}}} \, rect_{T_{c,E5a-Q}}\left(t - i\,T_{C,E5a-Q}\right) \right]$$

$$e_{E5b-I}(t) = \sum_{i=-\infty}^{+\infty} \left[c_{E5b-I,|i|_{L_{E5b-I}}} \, d_{E5b-I,[i]_{DC_{E5b-I}}} \, rect_{T_{c,E5b-I}}\left(t - i\,T_{C,E5b-I}\right) \right]$$

$$e_{E5b-Q}(t) = \sum_{i=-\infty}^{+\infty} \left[c_{E5b-Q,|i|_{L_{E5b-Q}}} \, rect_{T_{C,E5b-Q}}\left(t - i\,T_{C,E5b-Q}\right) \right]$$

Eq. 2

The Galileo satellites transmit the E5 signal components with the ranging codes chip rates and symbol rates stated in Table 4.

Signal (Parameter X)	Component (Parameter Y)	Ranging Code Chip-Rate RC,X-Y (Mchip/s)	Symbol-Rate RD,X-Y (symbols/s)
E5a	I	10.230	50
	Q	10.230	No data ('pilot component')
E5b	I	10.230	250
	Q	10.230	No data ('pilot component')

Table 4.   E5 Chip Rates and Symbol Rates

2.3.1.2. Modulation Type

The wideband E5 signal is generated with the AltBOC modulation of side-band sub-carrier rate $R_{S,E5}$ = $1/T_{S,E5}$=15.345 MHz (15 x 1.023 MHz) according to the expression in Eq. 3 with the binary signal components e_{E5a-I}, e_{E5a-Q}, e_{E5b-I} and e_{E5b-Q} as defined in Eq. 2. Note that E5a and E5b signals can be processed independently by the user receiver as though they were two separate QPSK signals with a carrier frequency of 1176.45 MHz and 1207.14 MHz respectively.

$$s_{E5}(t) = \frac{1}{2\sqrt{2}}\left(e_{E5a-I}(t) + j\,e_{E5a-Q}(t)\right)\left[sc_{E5-S}(t) - j\,sc_{E5-S}\left(t - T_{s,E5}/4\right)\right] +$$

$$\frac{1}{2\sqrt{2}}\left(e_{E5b-I}(t) + j\,e_{E5b-Q}(t)\right)\left[sc_{E5-S}(t) + j\,sc_{E5-S}\left(t - T_{s,E5}/4\right)\right] +$$

$$\frac{1}{2\sqrt{2}}\left(\overline{e}_{E5a-I}(t) + j\,\overline{e}_{E5a-Q}(t)\right)\left[sc_{E5-P}(t) - j\,sc_{E5-P}\left(t - T_{s,E5}/4\right)\right] +$$

$$\frac{1}{2\sqrt{2}}\left(\overline{e}_{E5b-I}(t) + j\,\overline{e}_{E5b-Q}(t)\right)\left[sc_{E5-P}(t) + j\,sc_{E5-P}\left(t - T_{s,E5}/4\right)\right]$$

Eq. 3

The respective dashed signal components $\overline{e}_{E5a-I}$, $\overline{e}_{E5a-Q}$, $\overline{e}_{E5b-I}$ and $\overline{e}_{E5b-Q}$ represent product signals according to Eq. 4:

$$\overline{e}_{E5a-I} = e_{E5a-Q}\,e_{E5b-I}\,e_{E5b-Q} \qquad \overline{e}_{E5b-I} = e_{E5b-Q}\,e_{E5a-I}\,e_{E5a-Q}$$

$$\overline{e}_{E5a-Q} = e_{E5a-I}\,e_{E5b-I}\,e_{E5b-Q} \qquad \overline{e}_{E5b-Q} = e_{E5b-I}\,e_{E5a-I}\,e_{E5a-Q}$$

Eq. 4

The parameters sc_{E5-S} and sc_{E5-P} represent the four-valued sub-carrier functions for the single signals and the product signals respectively:

$$sc_{E5-S}(t) = \sum_{i=-\infty}^{\infty} A\,S_{|i|_8}\,rect_{T_{S,E5}/8}\left(t - i\,T_{s,E5}/8\right)$$

$$sc_{E5-P}(t) = \sum_{i=-\infty}^{\infty} A\,P_{|i|_8}\,rect_{T_{S,E5}/8}\left(t - i\,T_{s,E5}/8\right)$$

Eq. 5

The coefficients ASi and APi are according to Table 5.

i	0	1	2	3	4	5	6	7
$2\,ASi$	$\sqrt{2}+1$	1	-1	$-\sqrt{2}-1$	$-\sqrt{2}-1$	-1	1	$\sqrt{2}+1$
$2\,APi$	$-\sqrt{2}+1$	1	-1	$\sqrt{2}-1$	$\sqrt{2}-1$	-1	1	$-\sqrt{2}+1$

Table 5.   AltBOC Subcarrier Coefficients

One period of the sub-carrier functions sc_{E5-S} and sc_{E5-P} is shown in Figure 4.
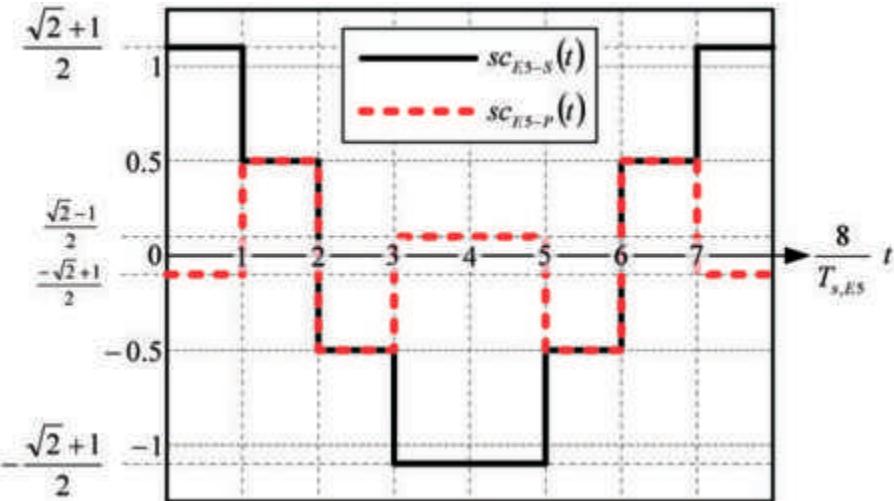

Figure 4.   One Period of the Two Subcarrier Functions Involved in AltBOC Modulation

2.3.1.3. Equivalent Modulation Type

Equivalently, the AltBOC complex baseband signal $s_{E5}(t)$ can be described as an 8-PSK signal according to Eq. 6. The corresponding phase states are illustrated in Figure 5.

$$s_{E5}(t) = \exp\left(j\frac{\pi}{4}k(t)\right) \quad \text{with} \quad k(t) \in \{1,2,3,4,5,6,7,8\},$$

Eq. 6
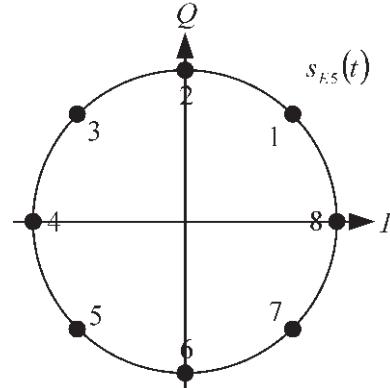

Figure 5.   8-PSK Phase-State Diagram of E5 AltBOC Signal

The relation of the 8 phase states to the 16 different possible states of the quadruple $e_{E5a\text{-}I}(t)$, $e_{E5a\text{-}Q}(t)$, $e_{E5b\text{-}I}(t)$, and $e_{E5b\text{-}Q}(t)$ depends also on time. Therefore, time is partitioned first in sub-carrier intervals $T_{s,E5}$ and further sub-divided in 8 equal sub-periods. The index i_{Ts} of the actual sub-period is given by Eq. 7 and determines which relation between input quadruple and phase states has to be used.

$$i_{Ts} = \text{integer part}\left[\frac{8}{T_{s,E5}}\left(t \; \text{modulo} \; T_{s,E5}\right)\right] \quad with \quad i_{Ts} \in \{0,1,2,3,4,5,6,7\}$$

Eq. 7

The dependency of phase-states from input-quadruples and time is given in Table 6.

		Input Quadruples															
eE5a-I		-1	-1	-1	-1	-1	-1	-1	-1	1	1	1	1	1	1	1	1
eE5b-I		-1	-1	-1	-1	1	1	1	1	-1	-1	-1	-1	1	1	1	1
eE5a-Q		-1	-1	1	1	-1	-1	1	1	-1	-1	1	1	-1	-1	1	1

Table 6. Look-up Table for AltBOC Phase States

2.3.2. E6 Signal

Figure 6 provides a generic view of the E6 signal generation.
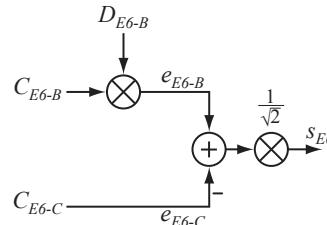

Figure 6. Modulation Scheme for the E6 Signal

The E6 signal B and C components are generated according to the following

- $e_{E6\text{-}B}$ from the C/NAV navigation data stream $D_{E6\text{-}B}$ modulated with the encrypted ranging code $C_{E6\text{-}B}$

- $e_{E6\text{-}C}$ (pilot component) from the ranging code $C_{E6\text{-}C}$

Equation 8 provides their mathematical description.

$$e_{E6-B}(t) = \sum_{i=-\infty}^{+\infty}\left[c_{E6-B,|i|_{L_{E6-B}}}\, d_{E6-B,[i]_{D_{C_{E6-B}}}}\, rect_{T_{C,E6-B}}\left(t - iT_{C,E6-B}\right)\right]$$

$$e_{E6-C}(t) = \sum_{i=-\infty}^{+\infty}\left[c_{E6-C,|i|_{L_{E6-C}}}\, rect_{T_{C,E6-C}}\left(t - iT_{C,E6-C}\right)\right]$$

Eq. 8

The Galileo satellites transmit the E6 signal components with the ranging codes chip rates and symbol rates stated in Table 7.

Component (Parameter Y)	Ranging code chip Rate $R_{C,E6-Y}$ (MChip/s)	Symbol Rate $R_{D,E6-Y}$ (symbols/s)
B	5.115	1000
C	5.115	No data ('pilot component')

Table 7.   E6 Chip Rates and Symbol Rates

The E6 signal is generated according to Eq. 9, with the binary signal components $e_{E6-B}(t)$ and $e_{E6-C}(t)$. Note that both pilot and data components are combined on the same carrier component, with a power sharing of 50 percent.

$$s_{E6}(t) = \frac{1}{\sqrt{2}}\left[e_{E6-B}(t) - e_{E6-C}(t)\right]$$

Eq. 9

2.3.3. E1 Signal

Figure 7 provides a generic view of the E1 CBOC signal generation.
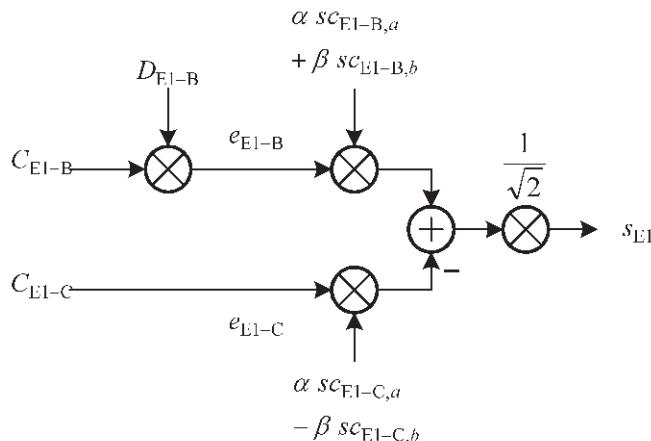

Figure 7.   Modulation Scheme for the E1 CBOC Signal

The E1 CBOC signal components are generated as follows:

- e_{E1-B} from the I/NAV navigation data stream D_{E1-B} and the ranging code C_{E1-B}, then modulated with the sub-carriers $sc_{E1-B,a}$ and $sc_{E1-B,b}$

- e_{E1-C} (pilot component) from the ranging code C_{E1-C} including its secondary code, then modulated with the sub-carriers $sc_{E1-C,a}$ and $sc_{E1-C,b}$

Equation 10 provides the mathematical description of these components.

$$e_{E1-B}(t) = \sum_{i=-\infty}^{+\infty}\left[c_{E1-B,|i|_{L_{L1-B}}} \, D_{E1-B,[i]_{D_{CE1-B}}} \, rect_{T_{c,E1-B}}\left(t - iT_{c,E1-B}\right)\right]$$

$$e_{E1-C}(t) = \sum_{i=-\infty}^{+\infty}\left[c_{E1-C,|i|_{L_{L1-C}}} \, rect_{T_{c,E1-C}}\left(t - iT_{c,E1-C}\right)\right]$$

Eq.10

Galileo satellites transmit ranging signals for the E1 signal with the chip rates and sub-carrier rates defined in the following Table 8.

Component (Parameter Y)	Sub-carrier Type	Sub-carrier Rate		Ranging Code Chip-Rate $R_{C,E1-Y}$ (Mcps)
		$R_{S,E1-Y,a}$ (MHz)	$R_{S,E1-Y,b}$ (MHz)	
B	CBOC, in-phase	1.023	6.138	1.023
C	CBOC, anti-phase	1.023	6.138	1.023

Table 8.   E1 SoL CBOC Chip- and Sub-carrier Rates

The navigation data message stream, after channel encoding, is transmitted with the symbol rate as stated in Table 9.

Component (Parameter Y)	Symbol Rate $R_{D,E1-Y}$ (symbols/s)
B	250
C	No data ('pilot component')

Table 9.   E1 SoL Symbol Rates

The E1 SoL composite signal is then generated according to equation Eq. 11 below, with the binary signal components $e_{E1-B}(t)$ and $e_{E1-C}(t)$. Note that as for E6, both pilot and data components are modulated onto the same carrier component, with a power sharing of 50 percent.

$$s_{E1}(t)=\frac{1}{\sqrt{2}}\left(e_{E1-B}(t)\left(\alpha\, sc_{E1-B,a}(t)+\beta\, sc_{E1-B,b}(t)\right)-e_{E1-C}(t)\left(\alpha\, sc_{E1-C,a}(t)-\beta\, sc_{E1-C,b}(t)\right)\right)$$

Eq. 11

$$\text{with}\quad sc_X(t)=\operatorname{sgn}\left(\sin\left(2\pi\, R_{s,X}\, t\right)\right)$$

The parameters α and β are chosen such as that the combined power of the $sc_{E1-B,b}$ and the $sc_{E1-C,b}$ sub carrier components equals 1/11 of the total power of e_{E1-B} plus e_{E1-C}, before application of any bandwidth limitation. This yields:

$$\alpha=\sqrt{\frac{10}{11}}\qquad\text{and}\qquad\beta=\sqrt{\frac{1}{11}}$$

One period of the sub-carrier function $\alpha\, sc_{E1-B,a}(t)+\beta\, sc_{E1-B,b}(t)$ for the E1-B signal component and one period of the sub-carrier function $\alpha\, sc_{E1-C,a}(t)-\beta\, sc_{E1-C,b}(t)$ for the E1-C signal component are shown in the following figure
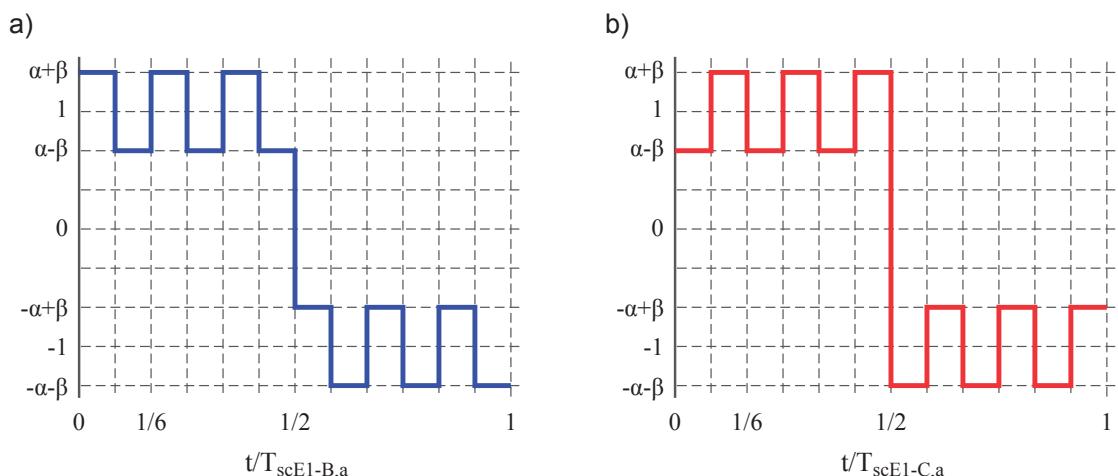

Figure 8.   One period of the CBOC sub-carrier for a) the L1-B signal component, and b) the L1-C signal component

2.4. Logic Levels

The correspondence between the logic level code bits used to modulate the signal and the signal level is according to the values stated in Table 10.

Logic Level	Signal Level
1	-1.0
0	+1.0

Table 10.   Logic to Signal Level Assignment

2.5. Transmitted Signal Phase Noise

The phase noise spectral density of the un-modulated carrier will allow a second-order phase locked loop with 10 Hz one-sided noise bandwidth to track the carrier to an accuracy of 0.04 radians RMS.

2.6. Transmitted Signals Code/Data Coherency

The edge of each data symbol coincides with the edge of a code chip. Periodic spreading codes start coincides with the start of a data symbol.

The edge of each secondary code chip coincides with the edge of a primary code chip. Primary code start coincides with the start of a secondary code chip.

2.7. Received Power Levels on Ground

2.7.1. Minimum Levels

The Galileo satellites will provide Galileo E5, E6 and E1 signals strength in order to meet the minimum levels specified in 0. The minimum received power on ground is measured at the output of an ideally matched RHCP 0 dBi polarized user receiving antenna when the SV elevation angle is higher than 10 degrees.

Signal	Signal Component	Total Received Minimum Power (dBW)
E5	E5a (total I+Q) (50/50% I/Q power sharing)	-155
	E5b (total I+Q) (50/50% I/Q power sharing)	-155
E6	E6 CS (total B+C) (50/50% E6-B/E6-C power sharing)	-155
E1	E1 OS/SoL (total B+C) (50/50% E1-B/E1-C power sharing)	-157

Table 11.   Received Minimum Power Levels on Ground

For a 5 degree user elevation angle, the user minimum received power will typically be 0.25 dB lower than specified in Table 11 above.

2.7.2. Maximum Levels

The Galileo terrestrial user's maximum received signal power level is, using the same assumptions as for the minimum received power, not expected to exceed 3 dB above the corresponding minimum received power.

For purposes of establishing user receiver dynamic range for receiver design and test, the maximum received signal power level is not expected to exceed 7 dB above the corresponding minimum received power.

2.8. Payload and Component Reception Losses

The correlation loss due to payload distortions will be below 0.6 dB.

For the reference receiver bandwidths defined in section 2.1.3, additional losses due to receiver filtering are to be considered, as shown in Table 12.

Signal	Loss (dB)
E1	0.1
E6	0.0
E5	0.4
E5a	0.6
E5b	0.6

Table 12.   Additional Losses due to Receiver Filtering

3. Galileo Spreading Codes Characteristics

3.1. Code Lengths

The ranging codes are built from so-called primary and secondary codes by using a tiered codes construction described in paragraph 3.2. The code lengths to be used for each signal component are stated in Table 13. Note that the E6 ranging codes are not subject of this SIS ICD.

Signal Component	Tiered Code Period (ms)	Code Length (chips)	
		Primary	Secondary
E5a-I	20	10230	20
E5a-Q	100	10230	100
E5b-I	4	10230	4
E5b-Q	100	10230	100
E1-B	4	4092	N/A
E1-C	100	4092	25

Table 13.   Code Lengths

3.2. Tiered Codes Generation

Long spreading codes are generated by a tiered code construction, whereby a secondary code sequence is used to modify successive repetitions of a primary code periods, as shown in Figure 9 for a primary code of length N and chip rate f_c, and a secondary code of length N_S and chip rate $f_{cs} = f_c/N$. The duration of N chips is also called a primary code epoch in Figure 9. In logical representation, the secondary code chips are sequentially exclusive-ored with the primary code, always one chip of the secondary code per period of the primary code.
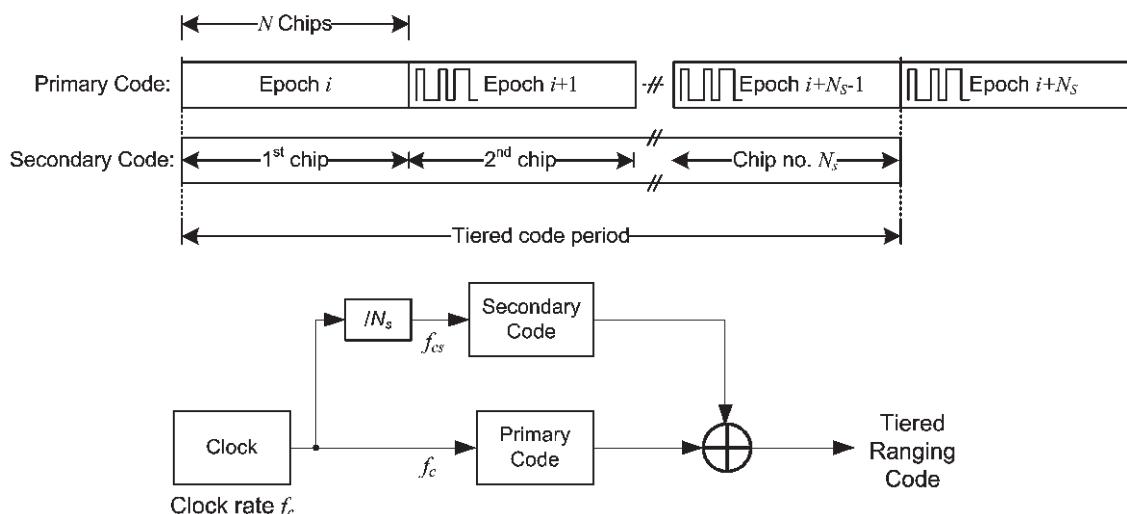

Figure 9.   Tiered Codes Generation

3.3. Primary Codes Generation

The primary spreading codes can be either

- Linear feedback shift register-based pseudo-noise sequences, or

- Optimized pseudo-noise sequences

Optimized codes need to be stored in memory and therefore are often called 'memory codes'. Register based codes used in Galileo are generated as combinations of two M-sequences, being truncated to the appropriate length. These codes can be generated either with pairs of LFSR or might be also stored in memory.

Figure 10 shows an example standard implementation of the LFSR method for the generation of truncated and combined M sequences. Two parallel shift registers are used: base register 1 and base register 2. The primary code output sequence is the exclusive OR of base register 1 and 2 output sequences, the shift between these two sequences is zero. Each shift register i (i=1 for base register 1 and i = 2 base register 2) of length R is fed back with a particular set of feedback taps $\{a_{i,j}\}_{j=1\ldots R} = [a_{i,1}, a_{i,2}, ..., a_{i,R}]$ and its content is represented by a vector $\{c_{i,j}\}_{j=1\ldots R} = [c_{i,1}, c_{i,2}, ..., c_{i,R}]$. For truncation to primary code length N, the content of the two shift registers is reinitialised (reset) after N cycles with the so-called start-values $\{s_{i,j}\}_{j=1\ldots R} = [s_{i,1}, s_{i,2}, ..., s_{i,R}]$.
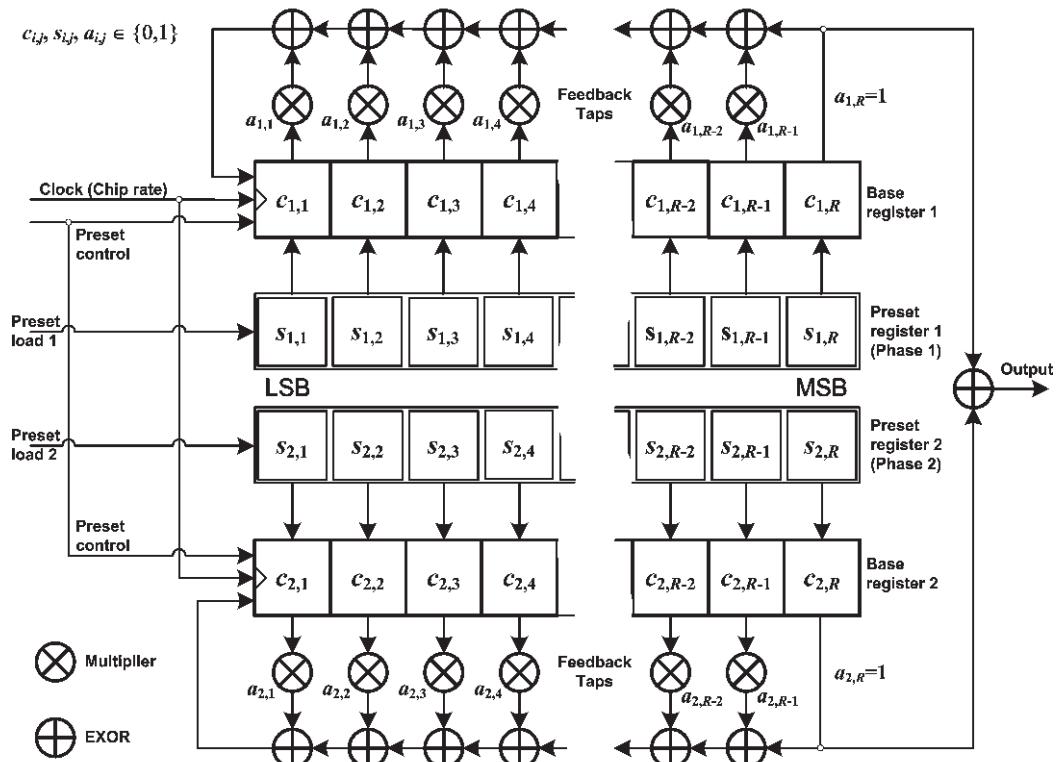

Figure 10.   LFSR Based Code Generator for Truncated and Combined M-sequences

3.4. Primary Codes Definition

3.4.1. E5 Primary Codes

In case of memory codes, the E5a-I, E5a-Q, E5b-I and E5b-Q primary codes are according to the representation provided in Annex C. In case of generation via LFSR, those primary codes use the principle defined in paragraph 3.3, using the parameters defined in Table 14. Note that each set of codes for each signal component comprises 50 members.

Component	Shift Register Length (polynomial order)	Feedback Taps (octal)	
		Register 1	Register 2
E5a-I	14	40503	50661
E5a-Q	14	40503	50661
E5b-I	14	64021	51445
E5b-Q	14	64021	43143

Table 14. E5 Primary Codes Specifications

The transformation between the octal notation and the vector description $\{a_{i,j}\}$ for the feedback tap positions is defined as follows and is illustrated with an example (Register 1 for E5a-I in Table 14) in Figure 11. After transferring the octal vector notation into binary notation, the bits are counted right to left starting with $j = 0$ from the LSB and ending with $j = R$ at the MSB, where R is the code register length. Then the jth bit applies for the feedback tap $a_{i,j}$ for $j = 1, …, R$, as shown in Figure 10. Note, $a_{i,R}$ is always one and $a_{i,0}$ is not considered in the register feedback tap.
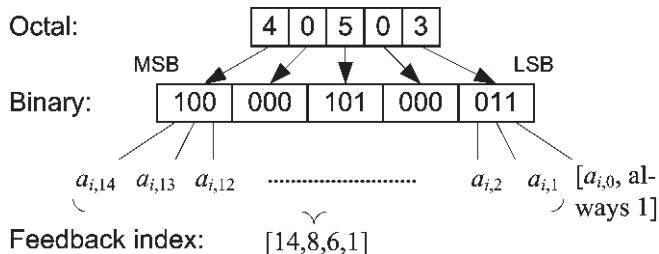

Figure 11. Code Register Feedback Taps Representation (example for E5a-I)

The start values for all base register 1 cells, in logic level notation, are '1' for all codes of E5a-I, E5a-Q, E5b-I and E5b-Q. The start values of base register 2 are provided in the subsequent sections. The transformation between the octal notation and the vector description $\{s_{i,j}\}$ for the register start values is defined as follows and is illustrated with an example in Figure 12 (code number 1 of E5a-I in Table 15). After transferring the octal notation in binary notation, the bits are counted right to left starting with $j=1$ (note the different start value compared to the feedback taps definition) from the LSB and ending with $j=R$ at the MSB, where R is the code register length. Then the jth bit applies to the start value $s_{i,j}$ for $j = 1, …, R$, as shown in Figure 10. Note in this example the MSB is zero in order to complete the 14-bits binary value sequence to fit into a sequence of octal symbols.
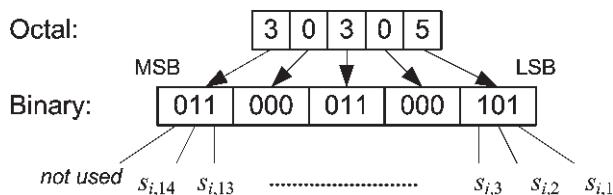

Figure 12. Start Value Representation for Base Register 2 (first code of E5a-I)

3.4.1.1. Base Register 2 Start Value for E5a-I

The octal format base register 2 start value with the convention defined in paragraph 3.4.1 is as defined in Table 15 for each primary E5a-I code. In addition, the conventional hexadecimal format of the first 24 code chips of the E5a-I primary codes is given in the table. For example, the first 24 chips of the E5a-I primary code N°1 in Table 15 are 0 0 1 1 1 1 0 0 1 1 1 0 1 0 1 0 1 0 0 1 1 1 0 1, the first binary value corresponding to the first primary code chip in time.

Table 18.   Base Register 2 Start Values and First Code Chip for E5b-Q

3.4.2. E1-B and E1-C Primary Codes

The E1-B and E1-C primary codes are pseudo-random memory code sequences according to the hexadecimal representation provided in Annex C. Note that each set of codes for each signal component comprises 50 members.

3.5. Secondary Codes

3.5.1. Definition of Secondary Codes

The secondary codes are fixed sequences as defined in hexadecimal notation in Table 19 and Table 20, following again the convention used in paragraph 3.4.1.1. For secondary codes whose length is not dividable by four (case of $CS25_1$ only), the last (most right-hand) hexadecimal symbol is obtained by filling up the last group of code chips with zeros at the end in time (to the right), to reach a final length of 4 binary symbols. Those two tables provide as well the code identifiers together with the code lengths, the number of hexadecimal symbols and the number of filled zeros.

For example, the CS251 secondary code in Table 19 corresponds to the binary sequence '0 0 1 1 1 0 0 0 0 0 0 0 1 0 1 0 1 1 0 1 1 0 0 1 0', the first binary value corresponding to the first secondary code chip in time.

Code Identifier	Code Length	No. of Hexadec. Symbols	Number of Filled up Zeros	Code Sequence
$CS4_1$	4	1	0	E

Table 20.   Secondary Code Sequences (Part 2)

3.5.2. Secondary Codes Assignment

The assignment of the secondary codes of paragraph 3.5.1 to the signal components is according to Table 21. For the 4, 20 and 25 bit secondary codes the same code is used for all associated primary codes. For the 100 bit codes, an independent secondary code is assigned for each primary code.

Component	Secondary Code Assignment
E5a-I	CS20_{1}
E5a-Q	CS100_{1-50}
E5b-I	CS4_{1}
E5b-Q	CS100_{51-100}
E6-B	N/A

Component	Secondary Code Assignment
E6-C	CS100$_{1-50}$
E1-B	N/A
E1-C	CS25$_1$

Table 21.   Secondary Code Assignment

3.6. Code Assignments to Satellites

3.6.1. Primary code assignment to satellites

The families of primary codes as well as their assignment to satellites as given below are provisional.

The E5a-I, E5a-Q, E5b-I, E5b-Q, L1-B, and L1-C primary codes (defined in Annex C) will be allocated to the space vehicle IDs (SVID) as given in the tables below

SVID	E5a-I	E5a-Q	E5b-I	E5b-Q
1	E5a-I code No 1	E5a-Q code No 1	E5b-I code No 1	E5b-Q code No 1

Table 25.   Allocation of L1-C secondary codes to SVIDs

4. Galileo Message Structure

4.1. General Message Format Specification

4.1.1. General Navigation Message Content

The Galileo signal-in-space data channels transmit different message types according to the general contents identified in Table 26 below. The F/NAV types of message correspond to the OS and the I/NAV types of message correspond to the SoL. Note that the C/NAV message format is not subject of this SIS ICD.

Message Type	Services	Component
F/NAV	OS	E5a-I
I/NAV	OS/CS/SoL	E5b-I and E1-B
C/NAV	CS	E6-B

Table 26.   Message Allocation and General Data Content

4.1.2. General Navigation Message Structure

The complete navigation message data are transmitted on each data component as a sequence of frames. A frame is composed of several sub-frames, and a sub-frame in turn is composed of several pages. The page is the basic structure for building the navigation message. This arrangement allows accomplishing the three different main categories of data to be transmitted, which are repeated at fast (for urgent data, such as integrity), medium (like data required for warm start TTF) and slow rates (like data required for cold start TTF).

For all message types, only the message pages as the smallest unit of data are equipped with a 'type' marker to identify the content of each page received by the user. There is no management data transmitted within the navigation message to indicate subframe and frame structures, and indeed these higher level structures are to be considered as typical flow of pages reflecting an instantaneous Galileo navigation message design, and may evolve together with future evolutions of Galileo. This evolution may involve also the inclusion of additional new page types beyond the types defined in this version of the Galileo OS SISICD. A user receiver is expected to be able to recognize page types and to react properly and well controlled to page types unknown to its software as well as to variations in the flow of the received pages.

4.1.3. Bit and Byte Ordering Criteria

All data values are encoded using the following bit and byte ordering criteria:

- For numbering, the most significant bit/byte is numbered as bit/byte 0

- For bit/byte ordering, the most significant bit/byte is transmitted first

4.1.4. FEC Coding and Interleaving Parameters

4.1.4.1. FEC Encoding

The convolutional encoding for all data pages on all signal components is performed according to the parameters given in Table 27.

Code Parameter	Value
Coding Rate	½
Coding Scheme	Convolutional
Constraint Length	7
Generator Polynomials	$G1$=171o $G2$=133o
Encoding Sequence	$G1$ then $G2$

Table 27.   Data Coding Parameters

Figure 13 depicts this convolutional coding scheme. Decoding can be implemented using a standard Viterbi decoder.
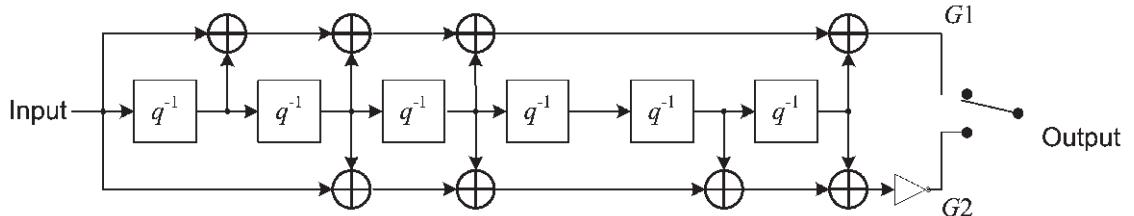

Figure 13.   Convolutional Coding Scheme

4.1.4.2. Interleaving

For each message type, the FEC encoded page is interleaved using a block interleaver with n columns (where data is written) and k rows (where data is read), as shown in Table 28.

Parameters	Message Type	
	F/NAV	I/NAV
Block interleaver size (Symbols)	488	240
Block interleaver dimensions (n columns x k rows)	61 x 8	30 x 8

Table 28.   Interleaving Parameters

4.1.5. Frame and Page Timing

Time stamps are inserted in the navigation message at regular intervals by the broadcasting satellite to identify absolute Galileo System Time (GST) in multiples of the shortest page period of 1 second. The exact timing of the page frame boundaries is used to identify fractional GST timing (less than one frame period). This is measured relative to the leading edge of the first chip of the first code sequence of the first page symbol of the page containing the TOW. The transmission timing of the navigation message provided through the TOW is synchronised to each satellite's version of GST.

4.2. F/NAV Message Description

4.2.1. General Description of the F/NAV Message

The F/NAV message structure is presented in Figure 14, where the duration of each entity is indicated.
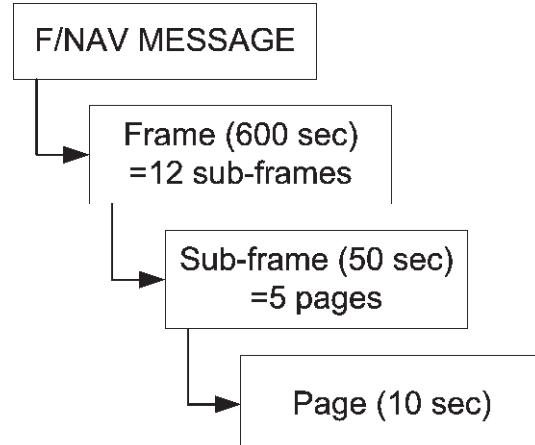

Figure 14. F/NAV Message Structure

4.2.2. F/NAV Page Layout

The page layout for the F/NAV message type is according to Table 29 where the symbols allocation and bits allocation are shown separately. The different fields composing this layout are defined in the sections below.

Sync.	F/NAV Symbols	Total (symb)
12	488	500

F/NAV Word			Tail	Total (bits)
Page type	Navigation Data	CRC		
6	208	24	6	244

Table 29. F/NAV Page Layout

4.2.2.1. Synchronisation Pattern

The synchronization pattern allows the receiver to achieve synchronisation to the page boundary. Note the synchronisation pattern is not encoded. The F/NAV synchronisation pattern is 101101110000

4.2.2.2. Tail Bits

The tail bits field consists of 6 zero-value bits enabling completion of the FEC decoding of each page's information content in the user receiver.

4.2.2.3. F/NAV Word

The useful data are contained in the F/NAV word composed of

- A page type field (6 bits) enabling to identify the page content as defined in paragraph 4.2.4

- A navigation data field (208 bits) whose structure is presented in paragraph 4.2.4

- A CRC (24 bits) to detect potential bit errors, according to paragraph 5.1.9.4. The CRC is computed on the Page Type and Navigation Data fields.

4.2.3. F/NAV Frame Layout

The F/NAV E5a-I message data packet transmission sequence is according to Table 30 where a whole frame is shown. Note that the odd numbered sub-frames contain the page type 5 and the even numbered sub-frames contain the page type 6. This allows the transmission of the almanacs for three satellites within two successive sub-frames (100 seconds). Thus the almanacs of the entire Galileo constellation (nominal 30 satellites, almanac transmission capacity within the standard message structure of 36 satellites) are transmitted within 20 minutes (two frames with appropriate k). The parameter k is transparent for the user. It is set by the Galileo system for each of the active satellites, such as to improve almanac transport time by exploiting source diversity.

	Page Type	Page Content
Subframe 1	1	SVID, clock correction, SISA, Ionospheric correction, BGD, Signal health status, GST and Data validity status
	2	Ephemeris (1/3) and GST
	3	Ephemeris (2/3) and GST

Table 36. Bits Allocation for F/NAV Page Type 6

4.2.5. F/NAV Dummy Page Definition

In case no valid F/NAV data is to be transmitted, the satellite generates and downlinks the dummy pages (Page Type 63) replacing the pages in the nominal sequencing, according to the format in Table 37. CRC is computed on the Page Type and Dummy sequence fields.

Type=63	Dummy sequence	CRC	Tail	Total (bits)
6	208	24	6	244

Table 37. Bits Allocation for F/NAV Dummy Page

4.3. I/NAV Message Description

4.3.1. General Description of the I/NAV Message

The I/NAV message structure is presented in Figure 15, where the duration of each entity is indicated.
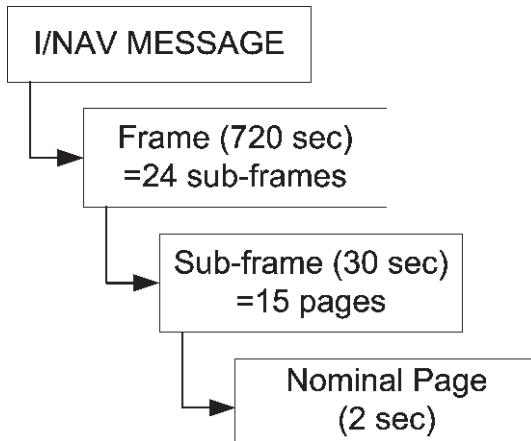

Figure 15. I/NAV Message Structure in the Nominal Mode

The I/NAV message structures for the E5b-I and E1-B signals use the same page layout since the service provided on these frequencies is a dual frequency service, using frequency diversity. Only page sequencing is different, with page swapping between both components in order to allow a fast reception of data by a dual frequency receiver. Nevertheless, the frame is designed to allow receivers to work also with a single frequency.

4.3.2. I/NAV Page Layout

Two types of I/NAV pages are defined

- Nominal pages having a duration of 2 seconds transmitted sequentially in time in two parts of duration 1 second each on each of the E5b-I and E1-B components according to Table 39. The first part of a page is denoted 'even' and the second one is denoted 'odd'.

- Alert pages having a duration of 1 second transmitted in two parts of duration 1 second each at the same epoch over the E5b-I and E1-B components according to Table 40. Again, the first part of a page is denoted 'even' and the second one is denoted 'odd'. This transmission is repeated at the next epoch but switching the two parts between the components.

The I/NAV page part (even or odd) layout is defined in Table 38 for both nominal and alert page types. This table shows the symbols allocation and bits allocation separately. The different fields composing this layout are defined in the sections below.

Sync.	I/NAV Page Part (even or odd) Symbols	Total (symb)
10	240	250

I/NAV Page Part (even or odd) Bits	Tail	Total (bits)
114	6	120

Table 38. I/NAV Page Part Layout

4.3.2.1. Synchronisation Pattern

The synchronization pattern allows the receiver to achieve synchronisation to the page boundary. Note the synchronisation pattern is not encoded. The I/NAV synchronisation pattern is 0101100000

The tail bits field consists of 6 zero-value bits enabling completion of the FEC decoding of each page's information content in the user receiver.

4.3.2.3.   I/NAV Page Part

The structure of the nominal I/NAV even and odd page parts on E5b-I and E1-B are defined in Table 39. A nominal page is composed by the two page parts (even and odd) transmitted sequentially over the same frequency ("vertical page").

E5b-I

Even/odd=0	Page Type	Data i (1/2)	Tail	Total (bits)
1	1	112	6	120

Even/odd=1	Page Type	Data i (2/2)	Reserved 1	CRC$_i$	Reserved 2	Tail	Total (bits)
1	1	16	64	24	8	6	120

E1-B

Even/odd=1	Page Type	Data j (2/2)	Reserved 1	SAR	Spare	CRC$_j$	Reserved 2	Tail	Total (bits)
1	1	16	40	22	2	24	8	6	120

Even/odd=0	Page Type	Data k (1/2)	Tail	Total (bits)
1	1	112	6	120

Table 39.   I/NAV Nominal Page with Bits Allocation

The parameters for the nominal page have the following meaning and related values:

● Even/Odd field (1 bit) to indicate the part of the page (0=even/1=odd) that is broadcast

● Page Type (1 bit) equal to 0 to indicate the nominal page type

● Data field composed of a nominal word (described in 4.3.5) of 128 bits (112 bits + 16 bits)

● The reserved fields will be published in a future update of this ICD

● SAR data (22 bits) composed of SAR RLM data on E1-B only as defined in 4.3.7

● CRC (24 bits) computed on the Even/Odd fields, Page Type fields, Data fields (1/2 and 2/2), Spare field, SAR (on E1-B only) and reserved fields (Reserved 1 for E5b-I and Reserved 1 for E1-B). In nominal mode the CRC is computed for the Even and Odd parts of a page of the same frequency ("vertical CRC") and is always broadcast on the second part of the "vertical page". Note the Reserved 2 field on E5b-I and the Reserved 2 field on E1-B are not protected by the CRC.

● Tail bits (2*6 bits) as defined in 4.3.2.2. These fields are not protected by the CRC

The structure of the alert I/NAV even and odd page parts on E5b-I and E1-B are defined in Table 40. An alert page is composed by the two page parts (even and odd) transmitted at the same epoch over E5b-I and E1-B ("horizontal page").

E5b-I

Even/odd=0	Page Type	Reserved 1 (1/2)	Tail	Total (bits)
1	1	112	6	120

Even/odd=1	Page Type	Reserved 1 (2/2)	CRC	Reserved 2	Tail	Total (bits)
1	1	80	24	8	6	120

E1-B

Even/odd=1	Page Type	Reserved 1 (2/2)	CRC	Reserved 2	Tail	Total (bits)
1	1	80	24	8	6	120

Even/odd=0	Page Type	Reserved 1 (1/2)	Tail	Total (bits)
1	1	112	6	120

Table 40. I/NAV Alert Page with Bits Allocation

The parameters for the alert page have the following meaning and related values:

- Even/Odd field to indicate the part of the page (0=even/1=odd) that is broadcast

- Page Type (1 bit) equal to 1 to indicate the alert page type

- CRC (24 bits) computed on the Page Type, Even/Odd field and on Reserved 1 (1/2 and 2/2). In alert mode the CRC is computed for the Even/ Odd pages of both frequencies E5b and E1-B ("horizontal CRC").

- The Reserved 1 and Reserved 2 fields will be published in a future update of this ICD. Note that the reserved 2 fields are not protected by CRC.

- Tail bits (2*6 bits) as defined in 4.3.2.2.

4.3.3. I/NAV Nominal Sub-Frame Layout

In the nominal mode, the page sequence for I/NAV E5b-I and I/NAV E1-B components in every sub-frame is according to Table 41 where T_0 is synchronized with GST origin modulo 30 seconds.

T_0 (GST$_0$ sync.) (s)	E5b Sub frame ID	E5b-I Page	E5b-I Content				E1-B Content						E1-B Page	E1B Sub frame ID
0	N	Even	Word 1 (1/2)				Spare Word (2/2)	Res	SAR	Spare	CRC	Res	Odd	N-1
1	N	Odd	Word 1 (2/2)	Res	CRC	Res	Word 2 (1/2)						Even	N
2	N	Even	Word 3 (1/2)				Word 2 (2/2)	Res	SAR	Spare	CRC	Res	Odd	N
3	N	Odd	Word 3 (2/2)	Res	CRC	Res	Word 4 (1/2)						Even	N
4	N	Even	Word 5 (1/2)				Word 4 (2/2)	Res	SAR	Spare	CRC	Res	Odd	N
5	N	Odd	Word 5 (2/2)	Res	CRC	Res	Word 6 (1/2)						Even	N

Table 41. I/Nav Nominal Sub-Frame Structure

T_0 (GST$_0$ sync.) (s)	E5b Sub frame ID	E5b-I Page	E5b-I Content	E1-B Content	E1-B Page	E1B Sub frame ID
6	N	Even	Word 7 or 9 (1/2)	Word 6 (2/2) | Res | SAR | Spare | CRC | Res	Odd	N
7	N	Odd	Word 7 or 9 (2/2) | Res | CRC | Res	Word 7 or 9 (1/2)	Even	N

When the field 'Time' is not set to '10', the fields WN and TOW do not contain valid data.

4.3.6. I/NAV Dummy Message Layout

In case no valid I/NAV data is to be transmitted, the satellite generates and downlinks the dummy message on E5b-I and E1-B components replacing the pages in the nominal sequencing, according to the Dummy pages layout defined in Table 54.

E5b-I

Even/odd=0	Page Type	Dummy data (1/2)	Tail	Total (bits)
1	1	112	6	120

Even/odd=1	Page Type	Dummy data (2/2)	CRC	Spare	Tail	Total (bits)
1	1	112	24	8	6	120

E1-B

Even/odd=1	Page Type	Dummy data (2/2)	CRC	Spare	Tail	Total (bits)
1	1	80	24	8	6	120

Even/odd=0	Page Type	Dummy data (1/2)	Tail	Total (bits)
1	1	112	6	120

Table 54.   I/NAV Dummy Page with Bits Allocation

The parameters for the dummy page have the following meaning and related values:

- Even/Odd (1 bit) to indicate the part of the page (0=even/1=odd) that is broadcast

- Page Type (1 bit) equal to 0 to indicate the nominal page type

- Dummy Data (192 bits = 80 bits + 112 bits)

- CRC (24 bits): computed on the Even/odd fields, Type fields and Dummy data fields (1/2 and 2/2) for the Even/Odd page of the same frequency ("vertical CRC"), and the CRC is always broadcast on the second part of the "vertical page"

- Spare (8 bits). This field is not protected by the CRC

- Tail bits (2*6 bits) as defined in 4.3.2.2. These fields are not protected by the CRC

The dummy data word is formatted according to Table 55, with

Type = 63	Dummy Sequence	Total (bits)
6	186	192
	Dummy Data (1/2) (112 bits) Dummy Data (2/2) (80 bits)	

Table 55.   Dummy Word with Bits Allocation

- Word Type (6 bits) to indicate the word type dummy message, which is defined as type 63

- The dummy sequence (186 bits) is an arbitrary sequence

4.3.7. SAR Field Structure

In the nominal mode the SAR RLM is transmitted only in the E1-B component. The SAR field structure for the E1-B component in nominal mode is formatted according to the values stated in Table 56. When an alert is present, the SAR data will not be transmitted

SAR Data			Total
Start Bit	Short/Long RLM Identifier	SAR RLM Data	(bits)
1	1	20	22

Table 56.   SAR Field Bit Structure

The RLM identifier bit is described in the following table.

RLM Identifier Value	Description
0	Short RLM
1	Long RLM

Table 57.   RLM Identifier Description

SAR data in Nominal Mode

In nominal mode, 22 bits are allocated to SAR data in one E1-B I/NAV page. The SAR messages are formatted according to the values and structure stated in Table 58 and Table 59 respectively for the short RLM and the long RLM. This structure allows the downlink of a short RLM within 8 seconds and of a long RLM within 16 seconds. The content of the SAR data is provided in paragraph 5.2.

● Short RLM

Part (1/4)			Part (2/4)			Part (3/4)			Part (4/4)			
Start bit = 1	Short RLM	SAR RLM data — Beacon ID (1/3)	Start bit = 0	Short RLM	SAR RLM data — Beacon ID (2/3)	Start bit = 0	Short RLM	SAR RLM data — Beacon ID (3/3)	Start bit = 0	Short RLM	SAR RLM data — Message code	SAR RLM data — Parameters
1	1	20	1	1	20	1	1	20	1	1	4	16
22			22			22			22			

Table 58.   SAR Short RLM

● Long RLM

Part (1/8)			Part (2/8)			Part (3/8)			Part (4/8)			
Start bit = 1	Long RLM	SAR RLM data — Beacon ID (1/3)	Start bit = 0	Long RLM	SAR RLM data — Beacon ID (2/3)	Start bit = 0	Long RLM	SAR RLM data — Beacon ID (3/3)	Start bit = 0	Long RLM	SAR RLM data — Message code	SAR RLM data — Parameters (1/5)
1	1	20	1	1	20	1	1	20	1	1	4	16
22			22			22			22			

Part (5/8)			Part (6/8)			Part (7/8)			Part (8/8)		
Start bit = 1	Long RLM	SAR RLM data — Parameters (2/5)	Start bit = 0	Long RLM	SAR RLM data — Parameters (3/5)	Start bit = 0	Long RLM	SAR RLM data — Parameters (4/5)	Start bit = 0	Long RLM	SAR RLM data — Parameters (5/5)
1	1	20	1	1	20	1	1	20	1	1	20
22			22			22			22		

Table 59.   SAR Long RLM

Spare SAR Data

In case no valid SAR data is to be transmitted, the satellite generates the spare SAR data field according to Table 60.

SAR Data		Total
Start Bit	Spare	(bits)
1	21	22

Table 60.   Spare SAR Data

A SAR receiver will use the sequence of start bits (and only these) to identify SAR data parts belonging to SAR RLMs. Every time if both the currently received start bit and the start bit of the previous SAR data part are equal to one, the previous data part does not contain SAR relevant data.

5. Message Data Contents

This section describes the data items above mentioned. Semantics, formats and other characteristics are provided for all items to be transmitted inside frames.

5.1. Navigation Data

The navigation data contain all the parameters that enable the user to perform positioning service. They are stored on board each satellite with a validity duration and broadcast world-wide by all the satellites of the Galileo constellation. The 4 types of data needed to perform positioning:

- Ephemeris which are needed to indicate the position of the satellite to the user receiver

- Time and clock correction parameters which are needed to compute pseudo-range

- Service parameters which are needed to identify the set of navigation data, satellites, and indicators of the signal health

- Almanac which are needed to indicate the position of all the satellites in the constellation with a reduced accuracy

5.1.1. Ephemeris

The ephemeris for each Galileo satellite is composed of 16 parameters, which are:

- 6 keplerian parameters

- 6 harmonic coefficients

- 1 orbit inclination rate correction parameter

- 1 LAN rate correction parameter

- 1 mean motion correction parameter, and

- 1 reference time parameter t_{0e} for the ephemeris data set

The ephemeris for each Galileo satellite is according to the characteristics stated in Table 61.

Parameter	Definition	Bits	Scale factor	Unit
M_0	Mean anomaly at reference time	32*	2^{-31}	semi-circles**
Δn	Mean motion difference from computed value	16*	2^{-43}	semi-circles/s**
e	Eccentricity	32	2^{-33}	N/A
$A^{1/2}$	Square root of the semi-major axis	32	2^{-19}	meters1/2
Ω_0	Longitude of ascending node of orbital plane at weekly epoch	32*	2^{-31}	semi-circles**
i_0	Inclination angle at reference time	32*	2^{-31}	semi-circles**
ω	Argument of perigee	32*	2^{-31}	semi-circles**

Parameter	Definition	Bits	Scale factor	Unit
$\dot{\Omega}$	Rate of right ascension	24*	2^{-43}	semi-circles/s**
$\dot{i}$	Rate of inclination angle	14*	2^{-43}	semi-circles/s**
C_{uc}	Amplitude of the cosine harmonic correction term to the argument of latitude	16*	2^{-29}	radians
C_{us}	Amplitude of the sine harmonic correction term to the argument of latitude	16*	2^{-29}	radians
C_{rc}	Amplitude of the cosine harmonic correction term to the orbit radius	16*	2^{-5}	meters
C_{rs}	Amplitude of the sine harmonic correction term to the orbit radius	16*	2^{-5}	meters
C_{ic}	Amplitude of the cosine harmonic correction term to the angle of inclination	16*	2^{-29}	radians
C_{is}	Amplitude of the sine harmonic correction term to the angle of inclination	16*	2^{-29}	radians
t_{0e}	Ephemeris reference time	14	60	seconds
Total Ephemeris Size		**356**		

Table 61.   Ephemeris Parameters

* Parameters so indicated are two's complement, with the sign bit (+ or -) occupying the MSB.
** Note that the 'semi-circle' is not a SI unit but can be converted as: 1 semi-circle = π rad

A single ephemeris is applicable to all signals of a specific satellite. The ephemeris is computed with respect to the apparent CoP common to every frequency.

The user can compute the ECEF coordinates of the SV's antenna phase centre position at GST time t utilizing the equations shown in Table 62.

Constant	Description
π = 3.1415926535898	Ratio of a circle's circumference to its diameter
μ = 3.986004418 × 1014 m3/s2	Geocentric gravitational constant
ωE = 7.2921151467 × 10-5 rad/s	Mean angular velocity of the Earth
c=299792458 m/s	Speed of light

Computation	Description
$A = (A^{1/2})2$	Semi-major axis
$n_0 = \sqrt{\dfrac{\mu}{A^3}}$	Computed mean motion (rad/s)
$t_k = t - t_{0e}$ *	Time from ephemeris reference epoch
$n = n_0 + \Delta n$	Corrected mean motion
$M = M_0 + n t_k$	Mean anomaly
$M = E - e\ sin(E)$	Kepler's Equation for Eccentric Anomaly E (may be solved by iteration)

Computation	Description
$v = \tan^{-1}\left\{\dfrac{\sin v}{\cos v}\right\}$ $= \tan^{-1}\left\{\dfrac{\sqrt{1-e^2}\,\sin E / (1 - e\cos E)}{(\cos E - e)/(1 - e\cos E)}\right\}$	True Anomaly
$\Phi = v + \Omega$	Argument of Latitude
$\delta u = C_{us}sin2\Phi + C_{uc}cos2\Phi$	Argument of Latitude Correction
$\delta r = C_{rs}sin2\Phi + C_{rc}cos2\Phi$	Radius Correction
$\delta i = C_{is}sin2\Phi + C_{ic}cos2\Phi$	Inclination Correction
$u = \Phi + \delta u$	Corrected Argument of Latitude
$r = A(1 - e\cos E) + \delta r$	Corrected Radius
$i = i_0 + \delta i + \left[\dot{i}\right]t_k$	Corrected Inclination
$x' = \text{r cos u}$ $y' = \text{r sin u}$	Position in orbital plane
$\Omega = \Omega_0 + \left[\dot{\Omega} - \omega_E\right]t_k - \omega_E t_{0e}$	Corrected longitude of ascending node
$x = x'cos(\Omega) - y'cos(i)sin(\Omega)$ $y = x'sin(\Omega) - y'cos(i)cos(\Omega)$ $z = y'sin(i)$	GTRF coordinates of the SV antenna phase center position at time t

Table 62.   User Algorithm for Ephemeris Determination

* t is Galileo System Time (see e.g. paragraph 5.1.2). Furthermore, t_k is the actual total time difference between the time t and the epoch time t_{0e} (t_{0a} for the almanacs) and it accounts for beginning or end of week crossovers.

5.1.2. Galileo System Time (GST)

The GST is given as 32-bit binary number composed of two parameters as follows:

● The Week Number is an integer counter that gives the sequential week number from the origin of the Galileo time. This parameter is coded on 12 bits, which covers 4096 weeks (about 78 years). Then the counter is reset to zero to cover additional period modulo 4096.

● The Time of Week is defined as the number of seconds that have occurred since the transition from the previous week. The *TOW* covers an entire week from 0 to 604799 seconds and is reset to zero at the end of each week.

The GST parameters are transmitted according to the characteristics stated in Table 63.

Parameter	Definition	Bits	Scale factor	Unit
WN	Week Number	12	1	week
TOW	Time of Week	20	1	s
Total Galileo System Time Size		**32**		

Table 63.   GST Parameters

The GST start epoch shall be 00:00 UT on Sunday 22nd August 1999 (midnight between 21st and 22nd August). At the start epoch, GST shall be ahead of UTC by thirteen (13)

leap seconds. Since the next leap second was inserted at 01.01.2006, this implies that as of 01.01.2006 GST is ahead of UTC by fourteen (14) leap seconds.

The epoch denoted in the navigation messages by TOW and WN will be measured relative to the leading edge of the first chip of the first code sequence of the first page symbol. The transmission timing of the navigation message provided through the TOW is synchronised to each satellite's version of Galileo System Time (GST).

5.1.3. Clock Correction Parameters

The clock correction parameters are transmitted according to the values stated in Table 64.

Parameter	Definition	Bits	Scale factor	Unit
t_{0c}	Clock correction data reference Time of Week	14	60	s
a_{f0}	SV clock bias correction coefficient	31*	2^{-34}	s
a_{f1}	SV clock drift correction coefficient	21*	2^{-46}	s/s
a_{f2}	SV clock drift rate correction coefficient	6*	2^{-59}	s/s^2
Total Clock Correction Size		**72**		

Table 64.   Galileo Clock Correction Parameters

*   Parameters so indicated are two's complement, with the sign bit (+ or -) occupying the MSB.

Each Galileo satellite broadcasts its own clock correction data for all signals through the relevant signal, according to Table 65.

Message Type	Clock Model X=(f1,f2)	Satellite Time Correction Model Parameters	Services
F/Nav	(E1,E5a)	a_{f0} (E1,E5a) a_{f1} (E1,E5a) a_{f2} (E1,E5a) t_{0C} (E1,E5a)	Dual-Frequency (E1,E5a) Single-frequency E5a
I/NAV	(E1,E5b)	a_{f0} (E1,E5b) a_{f1} (E1,E5b) a_{f2} (E1,E5b) t_{0C} (E1,E5b)	Dual-Frequency (E1,E5b) Single-frequency E5b Single-frequency E1

Table 65.   Galileo Clock Correction Data

5.1.4. Satellite Time Correction Algorithm

Each satellite transmits time correction data. The predicted offset of the physical satellite signal TOT relative to the satellite signal TOT in GST can be computed for the dual frequency signal combination using the following formula:

$$TOT_c(X) = TOT_m(X) - \Delta t_{SV}(X) \qquad \text{Eq. 12}$$

where

- $(X)=(f_1,f_2)$ is the dual frequency combination f_1 and f_2 used for the clock model

- $TOT_C(X)$ is the corrected satellite TOT in GST for the signal combination X

- $TOT_m(X)$ is the physical satellite TOT for the signal combination X retrieved through pseudo-range measurements

- $\Delta t_{SV}(X)$ is the satellite time correction for the signal combination X computed by means of the time correction data retrieved from the navigation message

This satellite time correction is modelled through the following second order polynomial:

$$\Delta t_{SV}(X) = a_{f0}(X) + a_{f1}(X)[t - t_{0C}(X)] + a_{f2}(X)[t - t_{0C}(X)]^2 + \Delta t_r \text{ (s)}$$ Eq. 13

where

- $a_{f0}(X)$, $a_{f1}(X)$, and $a_{f2}(X)$ are defined in 5.1.3

- $t_{0c}(X)$ is the reference time for the clock correction as defined in 5.1.3

- t is the GST time in seconds

- Δt_r (s) is a relativistic correction term, given by $\Delta t_r = F\ e\ A^{1/2}\ sin(E)$ with the orbital parameters (e, $A^{1/2}$, E) as described in paragraph 5.1.1 and $F = -2\mu^{1/2}/c^2 = -4.442807309 \times 10^{-10}$ s/m$^{1/2}$

5.1.5. Broadcast Group Delay

The Broadcast Group Delay $BGD(f_1,f_2)$ broadcast through the Galileo navigation message is defined as follows:

$$BGD(f_1, f_2) = \frac{TR_1 - TR_2}{1 - \left(\dfrac{f_1}{f_2}\right)^2}$$ Eq. 14

where

- f_1 and f_2 denote the carrier frequencies of two Galileo signals

- TR_1 and TR_2 are the group delays of the signals whose carrier frequencies are respectively f_1 and f_2.

A single frequency user receiver processing pseudo-ranges from the frequency f_1 applies the following correction to the SV clock correction Δt_{SV} which is defined in paragraph 5.1.4

$$\Delta t_{SV}(f_1) = \Delta t_{SV}(f_1, f_2) - BGD(f_1, f_2)$$ Eq. 15

A single frequency user receiver processing pseudo-ranges from the frequency $f2$ applies the following correction to the SV clock correction $\Delta t SV$ which is defined in paragraph 5.1.4

$$\Delta t_{SV}(f_2) = \Delta t_{SV}(f_1, f_2) - \left(\frac{f_1}{f_2}\right)^2 BGD(f_1, f_2)$$ Eq. 16

A dual frequency user receiver processing pseudo-ranges from the two frequencies f_1 and f_2 does not apply any additional correction for group delay. The Broadcast Group Delay is coded according to the values stated in Table 66.

Parameter	Definition	Bits	Scale factor	Unit
BGD(E1,E5a)	E1-E5a Broadcast Group Delay	10*	2^{-32}	s
BGD(E1,E5b)	E1-E5b Broadcast Group Delay	10*	2^{-32}	s
Total Group Delay Size		**32**		

Table 66. BGD Parameters

* Parameters so indicated are two's complement, with the sign bit (+ or -) occupying the MSB.

Each Galileo satellite broadcasts its own BGD data for all signals, through the relevant signal according to Table 67.

Message Type	Type of Satellite Clocks	BGD(f_1,f_2)	Services
F/NAV	(E1,E5a)	BGD(E1,E5a)	Single-frequency E5a
I/NAV	(E1,E5b)	BGD(E1,E5b)	Single-frequency E1 Single-frequency E5b

Table 67. BGD Values Mapping on Messages and Services

5.1.6. Ionospheric Correction

The ionospheric model parameters include:

- the broadcast coefficients a_{i0}, a_{i1} and a_{i2} used to compute the Effective Ionisation Level Az

- the "Ionospheric Disturbance Flag" (also referred as "storm flag"), given for five different regions

These parameters are transmitted according to the characteristics stated in Table 68.

Parameter	Definition	Bits	Scale factor	Unit
a_{i0}	Effective Ionisation Level 1st order parameter	11	2^{-2}	sfu**
a_{i1}	Effective Ionisation Level 2nd order parameter	11*	2^{-8}	sfu**/degree
a_{i2}	Effective Ionisation Level 3rd order parameter	14*	2^{-15}	sfu**/degree^2
SF$_1$	Ionospheric Disturbance Flag for region 1	1	N/A	dimensionless
SF$_2$	Ionospheric Disturbance Flag for region 2	1	N/A	dimensionless
SF$_3$	Ionospheric Disturbance Flag for region 3	1	N/A	dimensionless
SF$_4$	Ionospheric Disturbance Flag for region 4	1	N/A	dimensionless
SF$_5$	Ionospheric Disturbance Flag for region 5	1	N/A	dimensionless
Total Ionosphere Correction Size		**41**		

Table 68. Ionospheric Correction Parameters

* Parameters so indicated are two's complement, with the sign bit (+ or -) occupying the MSB.
** Note that 'sfu' (solar flux unit) is not a SI unit but can be converted as: 1 sfu = 10^{-22} W/(m^2*Hz)

It is assumed that the ionospheric model corrects 70% of the ionosphere when operating on E5a, E5b, E6 and E1 frequencies. The effective ionisation level is computed according to the equation below where μ is the modified dip latitude MODIP.

$$Az = a_{i0} + a_{i1}\mu + a_{i2}\mu^2$$

Eq. 17

The Ionospheric Disturbance Flag has the following values: [0:No disturbance,1:Disturbance] in the region, where the regions are defined as:

- region 1: for the northern region (60°<MODIP<90°)
- region 2: for the northern middle region (30°<MODIP<60°)
- region 3: for the equatorial region (-30°<MODIP<30°)
- region 4: for the southern middle region (-60°<MODIP<-30°)
- region 5: for the southern region (-90°<MODIP<-60°)

5.1.7. GST-UTC Conversion Algorithm and Parameters

The UTC time t_{UTC} is computed through 3 different cases depending on the epoch of a possible leap second adjustment (scheduled future or recent past) given by DN, the day at the end of which the leap second becomes effective, and week number WN_{LSF} to which DN is referenced. "Day one" of DN is the first day relative to the end/start of week and WN_{LSF} is the Galileo week number modulo 256.

In addition to the parameters listed in Table 69, the following parameters are used in GST-UTC conversion algorithm:

- t_E is the GST as estimated by the user through its GST determination algorithm
- WN is the week number to which t_E is referenced, modulo 256

Case a

Whenever the leap second adjustment time indicated by WN_{LSF} and DN is not in the past (relative to the user's present time) and the user's present time does not fall in the time span which starts six hours prior to the effective time (= DN+3/4) and ends six hours after the effective time at (= DN+5/4), t_{UTC} is computed according to the following equations:

$$t_{UTC} = \left(t_E - \Delta t_{UTC}\right) \; \mathrm{mod}\mathit{ulo}\, 86400$$

$$\Delta t_{UTC} = \Delta t_{LS} + A_0 + A_1\left(t_E - t_{ot} + 604800\left(WN - WN_{ot}\right)\right)$$

Eq. 18

Case b

Whenever the user's current time falls within the time span of six hours prior to the leap second adjustment time to six hours after the adjustment time, t_{UTC} is computed according to the following equations (Δt_{UTC} as defined in case a):

$$t_{UTC} = W \, \mathrm{mod}\mathit{ulo}(86400 + \Delta t_{LSF} - \Delta t_{LS})$$

$$W = (t_E - \Delta t_{UTC} - 43200) \, \mathrm{mod}\mathit{ulo}\, 86400 + 43200$$

Eq. 19

Case c

Whenever the leap second adjustment time, as indicated by the WN_{LSF} and DN values, is in the "past" (relative to the user's current time) and the user's present time does not fall in the time span which starts six hours prior to the leap second adjustment time and ends six hours after the adjustment time, t_{UTC} is computed according to the following equation:

$$t_{UTC} = (t_E - \Delta t_{UTC}) \, \mathrm{mod}\mathit{ulo}(86400)$$

$$\Delta t_{UTC} = \Delta t_{LSF} + A_0 + A_1(t_E - t_{ot} + 604800(WN - WN_{ot}))$$

Eq. 20

The parameters for GST to UTC conversion are defined in Table 69.

Parameter	Definition	Bits	Scale factor	Unit
A_0	Constant term of polynomial	32*	2^{-30}	s
A_1	1st order term of polynomial	24*	2^{-50}	s/s
Δt_{LS}	Leap Second count before leap second adjustment	8*	1	s
t_{ot}	UTC data reference Time of Week	8	3600	s
WN_{ot}	UTC data reference Week Number	8	1	week
WN_{LSF}	Week Number of leap second adjustment	8	1	week
DN	Day Number at the end of which a leap second adjustment becomes effective	3	1	day
Δt_{LSF}	Leap Second count after leap second adjustment	8*	1	s
Total GST-UTC Conversion Size		**99**		

Table 69.   Parameters for the GST-UTC Conversion
*   Parameters so indicated are two's complement, with the sign bit (+ or -) occupying the MSB.

5.1.8. GPS to Galileo System Time Conversion and Parameters

The difference between the Galileo and the GPS time scales is given by the equation below.

$$\Delta t_{Systems} = t_{Galileo} - t_{GPS} = A_{0G} + A_{1G}\left[TOW - t_{0G} + 604800 \cdot \left(\left(WN - WN_{0G}\right)\bmod 64\right)\right] \ (s)$$

Eq. 21

with

- A_{0G} constant term of the offset $\Delta t_{systems}$

- A_{1G} rate of change of the offset $\Delta t_{systems}$

- t_{0G} reference time for GGTO data

- $t_{Galileo}$ GST time (s)

- t_{GPS} GPS time(s)

- WN GST Week Number

- $WN0G$ Week Number of the GPS/Galileo Time Offset reference

The GGTO parameters are formatted according to the values in Table 70.

Parameter	Definition	Bits	Scale factor	Unit
A_{0G}	Constant term of the polynomial describing the offset $\Delta t_{systems}$	16*	2^{-35}	s
A_{1G}	Rate of change of the offset $\Delta t_{systems}$	12*	2^{-51}	s/s
t_{0G}	Reference time for GGTO data	8	3600	s
WN_{0G}	Week Number of GGTO reference	6	1	week
Total GST-GPS Conversion Size		**42**		

Table 70.   Parameters for the GPS Time to GST Offset Computation

When the GGTO is not available the GGTO parameters disseminated are: A_{0G} (all ones -16 bits), A_{1G} (all ones - 12 bits), t_{0G} (all ones - 8 bits), WN_{0G} (all ones - 6 bits). When a user receives all four parameters set to all ones the GGTO is considered as not valid.

5.1.9. Service Parameters

5.1.9.1. Satellite ID

The satellite Identification is coded with 6 bits and has the characteristics given in Table 71.

Parameter	Definition	Bits	Scale Factor	Unit	Values
SV$_{ID}$	Satellite Identification	6	N/A	dimensionless	0…63

Table 71.   Satellite ID

5.1.9.2. Issue Of Data

The navigation data is disseminated in data batches each one identified by an Issue of Data. In nominal operation the navigation data (ephemeris, satellite clock correction and SISA) have limited validity duration depending on the data type. The identification of each batch by an Issue of Data (IOD) value enables:

● the users to distinguish the data in different batches received from each satellite

● to indicate to the user receiver the validity of the data (which have to be updated using new issue of navigation data)

● the user receiver to compute the full batch of data even if it misses some pages or start receiving the data somewhere during the transmission

Two IODs are defined for (Table 72):

● the ephemeris, satellite clock correction parameters and SISA

● the almanacs

Data Type	Bits	Unit
Ephemeris and Clock correction IODnav	10	dimensionless
Almanacs IODa	4	dimensionless

Table 72.   IOD Values Mapping on Data Type

Each IOD has an associated reference time parameter disseminated within the batch.

Note,   the broadcast group delay, ionospheric corrections, GST-UTC and GST-GPS conversion parameters, navigation data validity status and signal health status are not identified by any issue of data value.

5.1.9.3. Navigation Data Validity and Signal Health Status

The signal health status and data validity status refer to the transmitting satellite. These status flags are used as service performance level notification (e.g. notification of satellite non availability). The navigation data validity status transmitted on E5a, E5b and E1, is coded on 1 bit, according to Table 73 and Table 74.

Parameter	Definition	Bits	Scale factor	Unit
E5a$_{DVS}$	E5a Data Validity Status	1	N/A	dimensionless

Table 73.   Data Validity Satellite Status (transmitted on E5a)

Parameter	Definition	Bits	Scale factor	Unit
E5b$_{DVS}$	E5b Data Validity Status	1	N/A	dimensionless
E1-B$_{DVS}$	E1-B Data Validity Status	1	N/A	dimensionless

Table 74.   Data Validity Satellite Status (transmitted on E5b and E1-B)

The data validity status bit has the values shown in Table 75:

Data Validity Status	Definition
0	Navigation data valid (tbc)
1	Working without guarantee

Table 75.   Data validity Status Bit Values

The E5a signal health status transmitted on E5a-I is coded on 2 bits according to Table 76.

Parameter	Definition	Bits	Scale factor	Unit
E5a$_{HS}$	E5a Signal Health Status	2	N/A	dimensionless

Table 76.   Signal Health Status for E5a (transmitted on E5a)

The E5b and E1-B signal health status transmitted on E5b and E1-B are coded on 2 bits according to the following table.

Parameter	Definition	Bits	Scale factor	Unit
E5b$_{HS}$	E5b Signal Health Status	2	N/A	dimensionless
E1-B$_{HS}$	E1-B Signal Health Status	2	N/A	dimensionless

Table 77.   Signal Health Status for E5b and E1 (transmitted on E5b and E1-B)

The signal status bits have the values shown in Table 78.

Signal Health Status	Definition (tbc)
0	Signal OK
1	Signal out of service
2	Signal will be out of service
3	Signal Component currently in Test

Table 78.   Signal Health Status Bit Values (definitions are tbc)

5.1.9.4. Checksum

The checksum, which employs a CRC technique, is used to detect the reception of corrupted data. The checksum does not include the frame synchronisation pattern or the tail bit fields since these do not form part of the required message information. For the F/NAV and I/NAV data, a CRC of 24 bits is generated from the generator polynomial G(X) described below.

$$G(X) = (1 + X) \, P(X)$$

Eq. 22

P(X) is a primitive and irreducible polynomial given by the following equation.

$$P(X) = X^{23} + X^{17} + X^{13} + X^{12} + X^{11} + X^9 + X^8 + X^7 + X^5 + X^3 + 1$$

Eq. 23

The CRC is composed of a sequence of 24 parity bits p_i; for any i from 1 to 24, p_i is the coefficient of X^{24-i} in $R(X)$ where:

- $R(X)$ is the remainder of the binary polynomial algebra division of the polynomial $m(X) X^{24}$ by $G(X)$ and

- $m(X) = m_1 X^{k-1} + ... + m_{k-2} X^2 + m_{k-1} X + m_k$ with $m_1, m_2, ..., m_k$ the sequence of k-bits information to be protected by the CRC, and m_1 as the MSB.

5.1.10. Almanac

The almanac data is a reduced-precision subset of the clock and ephemeris parameters of the active satellites in orbit. The user receiver utilises the algorithm described in paragraph 5.1.1 to compute the positions of the Galileo satellites. All other parameters appearing in the equations of Table 62, but not included in the content of the almanac, are set to zero for satellite position determination.

The Galileo almanac orbital parameters consist of

- Mean of semi-major axis

- Eccentricity

- Inclination

- Right ascension of the ascending node

- Argument of perigee

- Mean anomaly

A reduced set of clock correction parameters is provided as well in the almanac for each satellite including the time of applicability t_{oa} of the almanac data. This almanac reference time t_{0a} is referenced to the almanac reference week (WN_a). The WN_a term consists of two bits which is a Modulo 4 binary representation of the GST week number.

Additionally, a predicted satellite health status is provided for each of these satellites, giving indications on the satellite's signal components health and navigation data health. Finally, the IOD_a allows identifying without ambiguity an almanac batch. The almanac parameters are transmitted according to the characteristics stated in Table 79.

Parameter	Definition	Bits	Scale factor	Unit
SVID	Satellite ID (1 constellation of 36 satellites)	6	1	dimensionless
$\Delta(a^{1/2})$	Difference with respect to the square root of the nominal semi-major axis (see Table 61)	13*	2^{-9}	meters1/2
e	Eccentricity	11	2^{-16}	dimensionless
δ_i	Inclination at reference time relative to i_0 = 56°	11*	2^{-14}	semi-circles***
Ω_0	Right ascension	16*	2^{-15}	semi-circles***
$\dot{\Omega}$	Rate of right ascension	11*	2^{-33}	semi-circles/s***
ω	Argument of perigee	16*	2^{-15}	semi-circles***
M_0	Satellite mean anomaly at reference time	16*	2^{-15}	semi-circles***

Parameter	Definition	Bits	Scale factor	Unit
a_{f0}	Satellite clock correction bias "truncated"	16*	2^{-19}	s
a_{f1}	Satellite clock correction linear "truncated"	13*	2^{-38}	s/s
SV_{status}**	Satellite signal health status	2 (F/NAV) 4(I/NAV)	NA	dimensionless
Total Satellite Almanac Size		**131(F/NAV) 133(I/NAV)**		
IOD_a	Almanac Issue Of Data	4	NA	dimensionless
t_{0a}	Almanac reference time	10	600	s
WN_a	Almanac reference Week Number	2	1	week
Total Almanac References Size		**16**		

Table 79.   Almanac Parameters

* Parameters so indicated are two's complement, with the sign bit (+or-) occupying the MSB
** The F/NAV almanac transmitted by the E5a-I componenet contains the signal health status $SVB_{status}(E5aB_{HS})$ coded on 2 bits. The I/NAV almanac transmitted by the E5b-I and E1-B components contains both signal health status $SVB_{status}(E5b_{HS})$ and $SVB_{status}(E1B_{HS})$ coded on 2 bits each.
*** Note that the 'semi-circle' is not a SI unit but can be converted as: 1 semi-circle = π radian

5.1.11. Signal In Space Accuracy

The signal In Space Accuracy (SISA) definition will be published in a future update of this SIS ICD.

5.2. SAR Data

Each Return Link Message encapsulated in a SAR data page contains the following data

- Beacon ID (60 bits). This field is used by the beacon to discern whether the RLM received is addressed to itself or to some other beacon

- Message code (4 bits) defining the message type

- Parameters field (16 bits for the short RLM, 96 bits for the long RLM). This field provides the information that SAR operators wish to send to the Galileo-equipped beacon.

Short RLMs are used to provide the activated Galileo-equipped beacon with a short acknowledgement or various kinds of commands (e.g. to reduce its transmission rate). Long RLMs are intended for more complex commands in which several parameters may be required (e.g. to contain operational information or the coordinates of a location).

6. Annex A - List of Acronyms

AltBOC	Constant envelope modulation scheme for combining two sidebands each consisting itself of two binary signals (in I- and Q-component).
BGD	Broadcast Group Delay
CDMA	Code Division Multiple Access
COSPAS-SARSAT	Cosmicheskaya Systyema Poiska Avariynich Sudov - Search and Rescue Satellite Aided Tracking
CRC	Cyclic Redundancy Check
CS	Commercial Service
ECEF	Earth-Centered, Earth-Fixed
FEC	Forward Error Correction
GGTO	Galileo/GPS Time Offset
GPS	Global Positioning System
GST	Galileo System Time
ICD	Interface Control Document
ID	Identification
IOD	Issue Of Data
JTIDS	Joint Tactical Information Distribution System
LAN	Longitude of the Ascending Node
LSB	Least Significant Bit
CBOC	Composite Binary Offset Carrier modulation
Mcps	Mega chips per second
MHz	Megahertz
MIDS	Multifunctional Information Distribution System
MSB	Most Significant Bit
MUX	Multiplexer
N/A	Not Applicable
OS	Open Service
Q	Quadrature Component
QPSK	Quadrature Phase-Shift Keying
RF	Radio Frequency
RHCP	Right-Hand Circular Polarization
RLM	Return Link Message
SAR	Search-and-Rescue Service/Signal
SIS	Signal-In-Space
SISA	Signal In Space Accuracy
SNF	Satellite Navigation Frame
SoL	Safety-of-Life Service
SV	Space Vehicle
SVID	Space Vehicle IDentificator
TACAN	TACtical Air Navigation (system) equipment
TOT	Time Of Transmission
TOW	Time Of Week
TTF	Time To Fix
UTC	Universal Time Coordinated
WN	Week Number

7. Annex B - Definitions and Nomenclature

E5-Signal	The Galileo E5-signal consists of the signals E5a, E5b (and modulation product signals) and is transmitted in the frequency band 1164 - 1215 MHz allocated to RNSS with a worldwide co-primary status. The E5-signal shares the band with the co-primary Aeronautical Radionavigation Service (ARNS) (ITU-R Radio Regulations). Moreover, it shares the band with other RNSS-signals provided by EGNOS, GPS-L5, GLONASS etc. as well as signals of the ARNS (DME, TACAN). Also found in the band is the JTIDS-MIDS signal which is permitted on an NIB.
E5a-Signal	The Galileo E5a-signal is an inherent element of the E5-signal and consists of a data-component transmitted in the in-phase component and a pilot-component transmitted in the quadrature component. The E5a-signal provides the F/NAV message supporting Galileo Open Service and overlaps (in the spectrum) with the GPS-L5-signal.
E5b-Signal	The Galileo E5b-signal is an inherent element of the E5-signal and consists of a data-component transmitted in the in-phase component and a pilot-component transmitted in the quadrature component. The E5b-signal provides the I/NAV message and supports Safety of Life service, Galileo system integrity and Open Service.
E6-Signal	The Galileo E6-signal consists of the signal components E6-B and E6-C and is transmitted in the frequency band 1215 - 300 MHz allocated on a worldwide co-primary basis (ITU-R Radio Regulations), sharing with radar systems of the radio navigation and radiolocation service. The signal components E6-B and E6-C are data-component and pilot-component respectively. The E6-signal provides the C-NAV message and supports Commercial Service.
E1- Signal	The Galileo E1-signal comprises the signal components E1-B and E1-C and is transmitted in the frequency band 1559 - 1610 MHz allocated to RNSS and ARNS on a worldwide co-primary basis (ITU-R Radio Regulations). The signal components E1-B and E1-C are data-component and pilot-component respectively. The E1-signal provides the I/NAV message and supports Safety of Life service, Galileo system integrity and Open Service.
Navigation Data Stream	Sequence of bits carrying the navigation data information by using a frame structured transmission protocol.
F/NAV Message	Freely accessible navigation message provided by the E5a signal for Open Service.
I/NAV Message	Integrity navigation message type provided by E5b and E1-B signals, supporting Safety of Life Service and providing extended system integrity information.
C/NAV Message	Commercial navigation message type provided by the E6-B signal supporting Commercial Service.
Data component	A data component is the result of modulating ranging code, sub-carrier (if present) and secondary code with a navigation data stream.
Pilot component	A pilot component (or dataless component) is made of ranging code, sub-carrier (if present) and secondary code only, not modulated by a navigation data stream.
Receiver reference bandwidth	The bandwidth of a hypothetical receiver with ideal (rectangular frequency response) input filters

8. Annex C - Galileo E1 and E5 Memory Codes

C.1. Introduction

This annex provides the optional memory based primary codes (expressed in hexadecimal format) for the Galileo Open Signal components E5a-I, E5a-Q, E5b-I, E5b-Q, E1-B, E1-C.

C.2. Hexadecimal Coding Convention

Generally, one hexadecimal symbol (0,..,9, A,..,F) corresponds to four succeeding code-chips. The leftmost code-chip corresponds to the first code-chip in time, and the rightmost code-chip corresponds to the last code-chip in time. The first group is built with the first four code-chips, the second group with the fifth to eighth code-chip etc.

For primary codes whose length is not dividable by four, the last hexadecimal symbol is built from the last group of code-chips, filled up with zeros at the end in time (to the right) to reach a final length of 4 binary symbols. The translation from the chip-stream to hexadecimal symbol stream is illustrated with an example code of length 10 in the next table.

Time (in Chip)	1	2	3	4	5	6	7	8	9	10	11	12
Logic Representation of Chip-Values	1	1	1	0	1	1	0	0	0	1	-	-
Logic Representation Filled up with Zeros at the End	1	1	1	0	1	1	0	0	0	1	0	0
Logic to Decimal Translation	x8 x4 x2 x1 ⊕				x8 x4 x2 x1 ⊕				x8 x4 x2 x1 ⊕			
Decimal Representation	14				12				4			
Hexadecimal Representation	E				C				4			
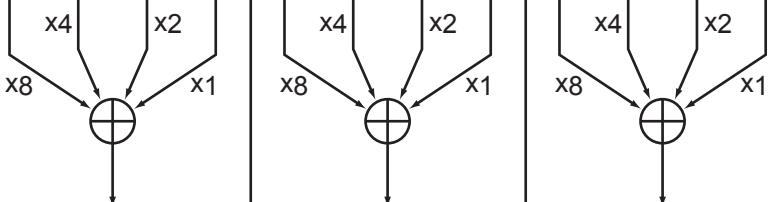

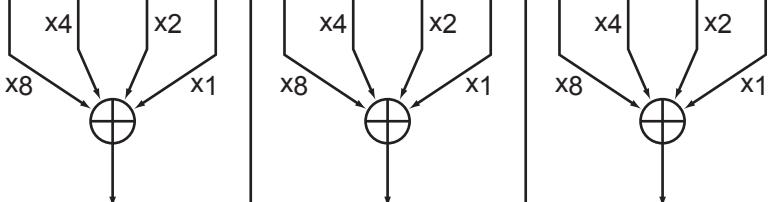

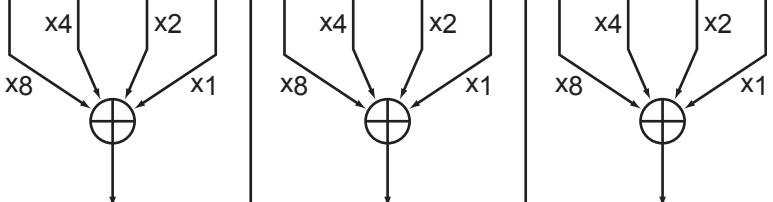

Table 80.   Example for the Translation of Logical (binary) Spreading Code into Hexadecimal Representation

The following table summarizes these code properties.

Component	Primary Code Length (chips)	Number of Hexadecimal Symbols	Number of Filled up Zeros	Number of Defined Codes
E5a-I	10230	2558	2	50
E5a-Q	10230	2558	2	50
E5b-I	10230	2558	2	50
E5b-Q	10230	2558	2	50
E1-B	4092	1023	0	50
E1-C	4092	1023	0	50

9. Annex D - Licence Agreement for Research and Development Purposes

Licence Contract

between

The European Union

and

XXXXXXXXXXXXXX

N° JRC.BXL.EA.xxxxx-xxxx

The European Union, represented by the European Commission, represented for the purpose of signing this Agreement by Mr Roland Schenkel, Director-General of the Joint Research Centre (hereinafter referred to as "the JRC"),

on the one part,

xxxxxxxxxxxxxx, having its seat at xxxxxx, xxxx, xxxxx (xxxx), xxxxx, registered under the number xxxxxx at xxxxxxx, represented for the purpose of signing this Agreement by xxxxxxx, xxxxxx and legal representative, in his official capacity (hereinafter referred to as "xxxxxx" or "the Licensee")

on the other part,

EUROPEAN UNION and XXXXXXX individually referred to as the "Party" and collectively as the "Parties"

WHEREAS

Pursuant to European Commission Decision of 12th September 2001 SEC (2001)1397 Article 13 the European Union has the mandate to exploit technologies resulting from the programmes and activities under its responsibility, grant licences thereto and promote technology transfer.

According to article 8 of Regulation (EC) No 683/2008 of the European Parliament and the Council of 9th July 2008 on the further implementation of the European satellite navigation programmes (EGNOS and Galileo (GNSS Regulation)), the "*Community shall be the owner of all tangible and intangible assets created or developed under the programmes, to which effect agreements shall be concluded with third parties, wherever appropriate, with regard to existing ownership rights*".

According to article 12 of the GNSS Regulation the European Commission shall be responsible for the EGNOS and Galileo Programmes.

As part of its management tasks, the European Commission is entrusted with the definition of the terms and conditions upon which third parties shall have access to the OS SIS ICD (Open Service Signal In Space Interface Control Document) related IPRs.

The aim of the European Union is to promote the take up and the wide spread diffusion of the GNSS technology related to the System developed under the Galileo Programme and to foster its use for research and development purposes.

On such basis the European Commission is interested to grant a license for the use of OS SIS ICD related IPRs, which it owns or has the right to sublicense, for the purposes of research and development, according to the terms and conditions specified here below.

The Licensee is interested in getting the license for the use of OS SIS ICD for the purposes and according to the terms and conditions of the present license agreement and the terms of use and disclaimer of the OS SIS ICD document, which he declares to have understood and accepted in full.

Now therefore, the Parties agrees as follows

ARTICLE 1 - Definitions

1.1. **Copyright** – shall mean any and all copyrighted works mentioned in Annex D1.

1.2. **Developments** and/or **Derivative Works** – shall mean research and development activities based on or related to the licensed OS SIS ICD IPRs.

1.3. **Effective date** – date of signature of the Licence Agreement by the last Party.

1.4. **Export Controls** – shall mean any international or national Export Control law or regulation applicable to the Licesee's activities under the OS SIS ICD IPRs, that regulates, embargoes or sanctions the export of products, information and/or technology in any way.

1.5. **The Field of Use** – shall mean research and development activities.

1.6. **GNSS Systems** – shall mean Global Navigation Satellite Systems.

1.7. **Improvements** – means all improvements, enhancements, alterations, modifications or adaptations to any part of the OS IPRs.

1.8. **Information** – the information exchanged between the European Commission and the Licensee during the execution of this Agreement, including but not limited to the Research and Development Plan, Result and Derivative Works, intellectual property rights.

1.9. **Infrastructure Developed Under the Galileo Programme** – shall mean the system of satellite and ground segments, comprised of hardware and software, designed and operated to provide the Open Service, the Public Regulated Service, the Safety of Life Service, the Commercial Service and the Search and Rescue service as defined in the Galileo Mission Requirement Document (MRD).

1.10. **Licensee Background** – shall mean all the information and knowledge whether or not they can be protected as intellectual property rights, which are needed for exploiting the Result.

1.11. **OS Signal** – the Open Signal broadcasted by the infrastructure developed under the Programme Galileo.

1.12. **OS SIS ICD** – the Open Service Signal in Space Interface Control Document in its latest version.

1.13. **OS SIS ICD IPRs** – shall mean any and all Intellectual Property Rights contained in the OS SIS ICD and mentioned in Annex D1.

1.14. **Patent** – shall mean any and all patents and/or patent applications mentioned in Annex D1, including the inventions described and claimed therein as well as any divisions, continuations, continuous-in-part and reissues thereof.

1.15. **Research and Development Plan** – shall mean the efforts and the strategy of the Licensee to exploit the OS SIS ICD IPRs for research and development activities, to be described by the Licensee and attached in Annex D2 to this Agreement for information purposes.

1.16. **Result** – shall mean all the results, whether tangible or intangible arising out of the research and development activities under this Agreement whether they can be protected as intellectual property rights or not.

1.17. **The Territory** – shall mean the territories subject to this Agreement and specified for each Intellectual Property Right in Annex D1.

1.18. **Valid Claim** – shall mean a claim of an issued and subsisting patent or of a published patent application in the Patents which claim has not been finally held to be invalid or unenforceable in the proceedings from which no further appeal may be taken within the time limit for taking that appeal.

ARTICLE 2 - Subject of the Agreement

The European Commission hereby grants the Licensee a non-exclusive royalty-free licence, limited to the Territory and Field of Use on the OS SIS ICD IPRs. The Licensee shall not be entitled to grant sublicenses of its rights under this Agreement.

ARTICLE 3 – Licensee's Rights and Obligations

3.1 The Licensee shall exploit the OS SIS ICD IPRs in the Field of Use in a manner so as not to harm:

i) the intellectual property rights of the European Union;

ii) the security of the European Union, as set forth under articles 13(4) and 17(1) of Regulation (EC) No 683/2008 of the European Parliament and of the Council of 9th July 2008 on the further implementation of the European satellite navigation programmes (EGNOS and Galileo).

3.2 The EU, as co-owner of the Galileo OS SIS ICD copyright, grants the Licensee the following user rights with reference to the Copyright pursuant to this Agreement:

i) the right to integrate and incorporate into any Result;

ii) the right to store the Copyright on any suitable medium.

3.3 The Licensee shall be solely responsible for:

i) exercising his rights hereunder strictly in compliance with all laws and regulations of each of the countries in which such exercise takes place;

ii) compliance with all Export Controls.

3.4 The Licensee shall continue to update the Research and Development Plan for the whole duration of the Agreement as per Annex D2 and provide the European Commission with information on its progress each year without requiring an amendment to the Agreement. The European Commission undertakes to keep the information contained in the Research and Development Plan confidential and not to disclose it to any third parties.

3.5 The Licensee shall mark all the Results with a clearly visible reference "*developed under a Licence of the European Union*".

The Licensee shall also mark the Results with the relevant patent or patent application numbers of the Patents to satisfy the laws of each of the countries in which the Results are covered by a Valid Claim.

3.6 The Licensee shall swiftly and without delay inform the European Commission in writing of any possible Result out of the research and development activities carried out by using the OS SIS ICD IPRs.

Once informed, the European Commission shall assess whether such Results are essential for the deployment and operation of the infrastructure developed under the Galileo Programme and for OS Signal provision and, in such case, enter into negotiations with the Licensee in order to obtain ownership of such Developments or Improvements in the name and on behalf of the European Union on fair and reasonable commercial terms. Any dispute around the terms and conditions for the above mentioned transfer of ownership shall be settled in accordance with art.14.

The Licensee shall assist and provide the European Commission with all necessary documentation and technical information for the sake of:

i) protecting the above mentioned Results and

ii) ensuring their interoperability with other existing GNSS Systems.

3.7 Should the European Commission decide not to assume ownership of the Result under 3.6 above, the Licensee undertakes to:

i) make available (free of charge) to the European Commission and to the interested third parties the Result for research and development purposes;

ii) make available (free of charge) to the European Commission and the interested parties all information related thereto for the sake of ensuring the interoperability of the Result with other existing GNSS Systems.

No disclosure to the public concerning such Results shall take place without explicit consent from the European Commission.

3.8 The same obligations under precedent paragraph 3.7 shall apply on the Licensee in case the Results are found by the European Commission not essential for the deployment and operation of the infrastructure developed under the Galileo Programme and for OS Signal provision.

3.9 The Licensee shall furthermore grant to the European Commission, and to the interested third parties, access to Licensee Background, on fair and reasonable commercial terms, when such access is needed for the deployment and operation of the Infrastructure Developed under the Galileo Programme and for OS Signal provision. Any dispute between the Licensee and the European Commission

around the scope, terms and conditions of the above mentioned access shall be settled in accordance with art.14.

ARTICLE 4 – European Commission Obligations

4.1   If in the course of the Agreement, the European Union assumes ownership of other OS related intellectual property rights (including intellectual property rights on the Result) than those listed in Annex D1, the European Commission is entitled – but not obliged – to update Annex D1 accordingly.

4.2   In case the above mentioned intellectual property rights are included in Annex D1, they shall be considered as licensed under the present Agreement, without the need to amend the Agreement.

ARTICLE 5 - Maintaining the Patent in force

The European Commission, and/or ESA, shall not be obliged to maintain the OS SIS ICD related Patents in force. If the European Commission decides not to maintain the OS SIS ICD related Patents (or part of it) in force, it shall promptly inform the Licensee in writing.

ARTICLE 6 - Duration, Renewal and Termination

6.1   The duration of the present Agreement shall be 10 years from the date of signature by the last Party. It may be renewed by mutual written agreement upon written request by registered letter by the Licensee six months before the expiry date of the Agreement.

6.2   Upon appropriate justified reasons, the Licensee may terminate this Agreement by serving six months' written notice by registered letter to the other Party. This Agreement may also be terminated at any time by written mutual agreement between the Parties.

6.3   In the event of termination of this Agreement in accordance with Article 6(2) and without prejudice to any other measures provided for in the Agreement, the Licensee shall:

   a)   discontinue the use of the Results or any other activity covered under Article 2 and

   b)   take all appropriate measures to minimize costs, prevent damage, and cancel his commitments.

6.4   In the event of non-performance by the Licensee of any of his obligations arising out of this Agreement (and in particular, but not exclusively, Article 3 and 7) and irrespective of the consequences provided under the law applicable to this Agreement, the European Commission may automatically terminate the Agreement without any legal formality, upon notice by registered letter to the Licensee at the address mentioned in Article 16. The consequences of such termination shall be those specified in Article 6.3(a) and 6.3(b).

ARTICLE 7 - Confidentiality obligation

7.1   The access of the European Commission and the Licensee to the Information shall be limited to the scope of the present Agreement.

All the information that shall consist of, but is limited to, the technical details, all business and manufacturing secrets and in particular research, development, production and market data as well as other business information and any other

information is communicated under strict confidence. Neither the European Commission nor the Licensee shall disclose to any third parties any confidential Information received by them.

7.2   The European Commission and the Licensee may only pass on the Information to their employees if such Information is required for evaluation. The European Commission and the Licensee must ensure that such employees having access to the Information are committed to confidentiality in the same way they have committed themselves and that they shall not divulge Information to third party even after completion of their assignment.

Licensee warrants that its employees, consultants and contractors are bound by confidentiality.

7.3   Any loss or damage, caused to one of the Parties of the present Agreement and arising out of the breach of this Article shall be borne exclusively by the Party responsible for such breach; the breaching Party shall be responsible for making compensation thereof and shall indemnify and hold harmless the other Party in respect of any such loss, damage or injury, including but not limited to reasonable attorneys fees.

ARTICLE 8 - Liability

8.1   The European Commission makes no representation as to the patentability and/or breadth of the OS SIS ICD IPRs licensed under the present Agreement. Furthermore, the European Commission makes no representation as to patents now held or which other parties in the Field of Use and the Licensed Product will hold for a particular purpose. The European Commission also makes no express or implied warranties of merchantability or fitness for a particular purpose of the OS SIS ICD IPRs. The European Commission declares that it has no knowledge of any deficiencies impairing the validity of the OS SIS ICD IPRs or of any technical defects in the inventions protected by OS SIS ICD IPRs. The European Commission assumes no liability and the Licensee shall keep it harmless in respect to any infringement of any patent or other right of third parties due to the Licensee's activities under this Agreement.

8.2   The European Commission disclaims all warranties, expressed or implied, relating to the OS SIS ICD IPRs or the use thereof by the Licensee or by third parties. The European Commission shall not be liable to any party and the Licensee shall keep it harmless for any claim, including on product liability, loss of use, interruption of business or consequential damages of any kind, including but not limited to loss of profits, loss of contracts, goodwill or anticipated savings, even if the European Commission has been advised, knew or should have known of the possibility of such damages.

8.3   The Licensee shall, at all times, hold harmless, indemnify and keep indemnified the European Space Agency (ESA) against any and all costs, claims, damages or expenses incurred by the ESA or for which the ESA may become liable with respect to any infringement of any patent or other intellectual property right of third parties due to the Licensee's activities in breach of this Agreement and for product liability or other claim relating to the Results and all third party claims arising from the Licensee's exploitation of the OS SIS ICD IPRs and/or the use of Results.

ARTICLE 9 - Infringements by third parties

The Parties hereto shall inform each other promptly of any act of infringement, passing-off, unfair competition or the like, or suspected or threatened such act, any challenge or any allegation or complaint by a third party in relation to use or intended use of the OS SIS ICD IPRs in the Territory which are subject to this Agreement.

The European Commission shall have the possibility to decide whether or not to bring an action for infringement against the infringer. In the event the European Commission decides not to bring an action for infringement against the infringer, it shall, within one month of becoming aware of the infringement, notify the Licensee, who will be entitled to do so directly.

ARTICLE 10 - Action for infringement brought by third parties

10.1 If actions for infringement are brought against the Licensee as a result of the exploitation of the OS SIS ICD IPRs, the costs incurred for its defence and payment of damages shall be borne by the Licensee. If an action for infringement is brought against the Licensee, he shall notify the European Commission and enable it to intervene in the action. The European Commission, at its discretion, may undertake to provide the Licensee with any assistance considered to be appropriate for its defence.

10.2 This Agreement and its validity shall not be influenced by the fact that one of the licensed OS SIS ICD IPRs should finally be declared invalid.

ARTICLE 11 - Intellectual property rights

11.1 OS SIS ICD IPRs are the exclusive property of the European Union and/or ESA respectively, as indicated in Annex D1.

11.2 The Licensee acknowledges the OS SIS ICD IPRs as described in Annex D1 to remain with the European Union and shall not acquire any intellectual property right on the OS SIS ICD IPRs under the present Agreement. During the time of the present Agreement, the Licensee shall not challenge the validity of OS SIS ICD IPRs, or support third parties in such a challenge.

ARTICLE 12 - Indemnification

12.1 Subject to Article 12(2), the Licensee shall defend at its own expense any claim, suit or proceeding brought against the Licensee, insofar as it arises from the Licensee's use of the OS SIS ICD IPRs and shall indemnify and hold the European Union harmless for all claims, damages, costs and expenses awarded to the Licensee or third parties against the European Union arising from any such claim, suit or proceeding.

12.2 In the event any claim, suit or proceeding is brought against the Licensee based on a claim that any portion of the OS SIS ICD IPRs constitutes an infringement of patent or copyright, or other intellectual property rights of any third party arising under the applicable law, the European Commission shall have the right, at its option, to assume the defence of such action. In such event, the European Commission shall pay all damages, costs and expenses finally awarded to the third parties against the Licensee but shall not be responsible for any compromise made without its consent.

The European Commission shall have, in addition to any other remedies available to it, the right to injunctive relief to enjoin breaches of this Agreement.

12.3 The Licensee shall use due diligence in order to prevent the infringement of any intellectual property rights during its marketing and distribution activities. In the event that the distribution activities of the Licensee lead to an infringement of the intellectual property rights, the Licensee shall be fully liable to the European Union for any damages resulting from such infringement.

ARTICLE 13 - Permits

The necessary steps for obtaining all permits and licences required for the implementation of this Agreement, under the laws and regulations in force at the place where the commercial activities of the Licensee are to be provided, shall be the exclusive responsibility of the Licensee.

ARTICLE 14 – Applicable Law and Arbitration

14.1 Any dispute, controversy or claim arising under, out of or relating to this contract and any subsequent amendments of this contract, including, without limitation, its formation, validity, binding effect, interpretation, performance, breach or termination, as well as non-contractual claims, shall be submitted to mediation in accordance with the WIPO Mediation Rules. The place of mediation shall be Brussels. The language to be used in the mediation shall be English.

14.2 If, and to the extent that, any such dispute, controversy or claim has not been settled pursuant to the mediation within 90 days of the commencement of the mediation, it shall, upon the filing of a Request for Arbitration by either Party, be referred to and finally determined by arbitration in accordance with the WIPO Expedited Arbitration Rules. Alternatively, if, before the expiration of the said period of days, either Party fails to participate or to continue to participate in the mediation, the dispute, controversy or claim shall, upon the filing of a Request for Arbitration by the other Party, be referred to and finally determined by arbitration in accordance with the WIPO Expedited Arbitration Rules. The arbitral tribunal shall consist of three arbitrators appointed by the parties. The place of arbitration shall be Brussels. The language to be used in the arbitral proceedings shall be English. The dispute, controversy or claim referred to arbitration shall be decided in accordance with the law of Belgium.

ARTICLE 15 Miscellaneous

15.1 This Agreement, including the Annexes attached hereto, is the entire Agreement among the Parties relating to the subject matter hereof and may only be modified by a written amendment signed by the authorised representatives of each Party.

15.2 The invalidity of a provision of this Agreement is not fundamental to its performance, the validity and enforceability of the remaining provisions hereof shall not in any way be affected thereby, it shall not relieve any of the Parties of its obligations and shall not deprive any of the Parties of benefits under the remaining provisions under this Agreement.

ARTICLE 16 - Administrative provisions

16.1 Any communication with reference to the performance of this Agreement, all notifications and any relevant correspondence shall be made in writing and addressed to the following addresses:

10. Annex E - Licence Agreement For Commercial Use

Licence Contract

between

The European Community

and

XXXXXXXXXXXXXX

N°.BXL.xxxxx-xxxx

The European Union, represented by the European Commission, represented for the purpose of signing this Agreement by Mr Roland Schenkel, Director-General of the Joint Research Centre (hereinafter referred to as "the JRC"),

on the one part,

xxxxxxxxxxxxxx, having its seat at xxxxxx, xxxx, xxxxx (xxxx), xxxxx, registered under the number xxxxxx at xxxxxxx, represented for the purpose of signing this Agreement by xxxxxxx, xxxxxx and legal representative, in his official capacity (hereinafter referred to as "xxxxxx" or "the Licensee")

on the other part,

EUROPEAN UNION and XXXXXXX individually referred to as the "Party" and collectively as the "Parties"

WHEREAS

Pursuant to European Commission Decision of 12th September 2001 SEC (2001)1397 Article 13 the European Union has the mandate to exploit technologies resulting from the programmes and activities under its responsibility, grant licences thereto and promote technology transfer.

According to article 8 of Regulation (EC) No 683/2008 of the European Parliament and the Council of 9th July 2008 on the further implementation of the European satellite navigation programmes (EGNOS and Galileo (GNSS Regulation)), the "*Community shall be the owner of all tangible and intangible assets created or developed under the programmes, to which effect agreements shall be concluded with third parties, wherever appropriate, with regard to existing ownership rights*".

According to article 12 of the GNSS Regulation the Commission shall be responsible for the EGNOS and Galileo Programmes.

As part of its management tasks, the Commission is entrusted with the definition of the terms and conditions upon which third parties shall have access to the OS SIS ICD (Open Service Signal In Space Interface Control Document) related IPRs.

The aim of the Community is to promote the take up and the wide spread diffusion of the GNSS technology and related applications as well as to foster its use for commercial purposes.

On such basis the European Commission is interested to grant a license for the use of OS SIS ICD related IPRs, which it owns or has the right to sublicense, for the purposes of:

- manufacturing and commercialisation of GNSS related devices;
- Provision of added value services

according to the terms and conditions specified here below.

The Licensee is interested in get the license for the use of OS SIS ICD for the purposes and according to the terms and conditions of the present license agreement and the terms of use and disclaimer of the OS SIS ICD document which he declares to have understood and accepted in full.

Now therefore, the Parties agrees as follows

ARTICLE 1 - Definitions

1.1 **Copyright** – shall mean any and all copyrighted works mentioned in Annex E1.

1.2 **Development Plan** – the efforts and the strategy of the Licensee to exploit the Licensee Products, to be described by the Licensee and attached in Annex E2 to this Agreement for information purposes.

1.3 **Developments and Derivative Works** – shall mean research and development activities based on or related to the licensed OS SIS ICD IPRs.

1.4 **Effective date** – date of signature of the Licence Agreement by the last Party.

1.5 **Export Controls** – shall mean any international or national Export Control law or regulation applicable to the Licesee's activities under the OS SIS ICD IPRs, that regulates, embargoes or sanctions the export of products, information and/ or technology in any way.

1.6 **The Field of Use** – shall mean the manufacturing, distribution, commercialisation sale and supply of Licensee Products and any Licensee internal activity required or functional to these purposes.

1.7 **GNSS Systems** – shall mean Global Navigation Satellite Systems.

1.8 **Improvements** – means all improvements, enhancements, alterations, modifications or adaptations to any part of the OS IPRs.

1.9 **The Information** – the information exchanged between the Commission and the Licensee during the execution of this Agreement, including but not limited to the Development Plan, Improvements, Developments and Derivative Works, Intellectual Property Rights.

1.10 **Infrastructure Developed Under the Galileo Programme** – shall mean the system of satellite and ground segments, comprised of hardware and software, designed and operated to provide the Open Service, the Public Regulated Service, the Safety of Life Service, the Commercial Service and the Search and Rescue service as defined in the Galileo Mission Requirement Document (MRD).

1.11 **Licensee Background** – shall mean all the Licensee information and knowledge whether or not they can be protected as intellectual property rights, which are needed for exploiting the OS SIS ICD IPRS.

1.12 **Licensee Products** – shall mean electronic devices (e.g. chipsets and receivers) and Value Added Services developed – directly or indirectly – by the Licensee by using the OS SIS ICD IPRs granted through this license.

1.13 **OS Signal** – the Open Signal broadcasted by the infrastructure developed under the Programme Galileo.

1.14 **OS SIS ICD** – the Open Service Signal in Space Interface Control Document in its latest version.

1.15 **OS SIS ICD IPRs** – shall mean any and all Intellectual Property Rights contained in the OS SIS ICD and mentioned in Annex E1.

1.16 **Patent** – shall mean any and all patents and/or patent applications mentioned in Annex E1, including the inventions described and claimed therein as well as any divisions, continuations, continuous-in-part and reissues thereof.

1.17 **The Territory** – shall mean the territories subject to this Agreement and specified for each Intellectual Property Right in Annex E1.

1.18 **Valid Claim –** shall mean a claim of an issued and subsisting patent or of a published patent application in the Patents which claim has not been finally held to be invalid or unenforceable in the proceedings from which no further appeal may be taken within the time limit for taking that appeal.

1.19 **Value Added Services** – any service developed on the basis or by using the OS and delivering different or additional capabilities with respect to the OS.

ARTICLE 2 - Subject of the Agreement

The Community hereby grants the Licensee a non-exclusive royalty-free licence, limited to the Territory and Field of Use on the OS SIS ICD IPRs. The Licensee shall not be entitled to grant sublicenses of its rights under this Agreement.

ARTICLE 3 – Licensee's Rights and Obligations

3.1 The Licensee shall exploit the OS SIS ICD IPRs in the Field of Use in a manner so as not to harm:

i) the intellectual property rights of the European Union;

ii) the security interests of the European Union, as set forth under articles 13(4) and 17(1) of Regulation (EC) No 683/2008 of the European Parliament and of the Council of 9th July 2008 on the further implementation of the European satellite navigation programmes (EGNOS and Galileo).

3.2 The EU, as co-owner of the Galileo OS SIS ICD copyright, grants the Licensee the following user rights with reference to the Copyright pursuant to this Agreement:

i) the right to integrate and incorporate into any Licensee Products;

ii) the right to make Improvements and/or create Developments and Derivative Works from the Copyright;

iii) the right to store the Copyright on any suitable medium.

3.3 Subject to the foregoing, Licensee shall have the right to select distributors and otherwise determine the commercial strategy, including all channels of distribution, regarding the distribution and sale of the Licensed Product in the Territory.

3.4 The Licensee shall be solely responsible for:

i) exercising his rights hereunder strictly in compliance with all laws and regulations of each of the countries in which such exercise takes place;

ii) compliance with all Export Controls.

3.5 The Licensee shall continue to update the Development Plan for the whole duration of the Agreement as per Annex E2 and provide the Commission with information on its progress each year without requiring an amendment to the Agreement. The European Commisison undertakes to keep the information contained in the Development Plan confidential and not to disclose it to any third parties.

3.6 The Licensee shall mark all the Licensee Products with a clearly visible reference "*developed under a Licence of the European Union*".

The Licensee shall also mark the Licensee Products with the relevant patent or patent application numbers of the Patents to satisfy the laws of each of the countries in which the Licensee Products are sold or supplied and in which they are covered by a Valid Claim.

3.7 The Licensee shall swiftly and without delay inform the European Commission in writing of any possible Development and Improvement made to the OS SIS ICD IPRs.

Once informed, the European Commission shall assess whether such Developments or Improvements are essential for the deployment and operation of the infrastructure developed under the Galileo Programme and for OS Signal provision and, in such case enter into negotiations with the Licensee in order to obtain ownership of such Developments or Improvements in the name and on behalf of the European Union on fair and reasonable commercial terms. Any dispute around the terms and conditions for the above mentioned transfer of ownership shall be settled in accordance with art.14.

The Licensee shall assist and provide the European Commission with all necessary documentation and technical information for the sake of:

i) protecting the above mentioned Improvements and

ii) ensure their interoperability with other existing GNSS Systems.

3.8. Should the European Commission decide not to assume ownership of the Improvements in question, the Licensee undertakes to make available to any interested party all information related thereto, according to modalities defined by the European Commission, for the sake of ensuring the interoperability of such improvements with other existing GNSS Systems.

No disclosure to the public concerning such Developments or Improvements shall take place without explicit consent from the Commission.

3.9 The Licensee shall furthermore grant to the European Commission, and to the interested third parties, access to the Licensee Background, on fair and reasonable commercial terms, when such access is needed for deployment and

operation of the Infrastructure Developed Under the Galileo Programme and for OS Signal provision.

ARTICLE 4 – Commission Obligations

4.1 If in the course of the Agreement, the European Union assumes ownership of other OS related intellectual property rights (included but not limited to Developments and Improvements) than those listed in Annex E1 the European Commission is entitled – but not obliged – to update Annex E1 accordingly.

4.2 In case the above mentioned intellectual property rights are included in Annex E1, they shall be considered as licensed under the present Agreement, without the need to amend the Agreement.

ARTICLE 5 - Maintaining the Patent in force

The European Commission, and/or ESA, shall not be obliged to maintain the OS SIS ICD related Patents in force. If the European Commission decides not to maintain the OS SIS ICD related Patents (or part of it) in force, it shall promptly inform the Licensee in writing.

ARTICLE 6 - Duration, Renewal and Termination

6.1 The duration of the present Agreement shall be 10 years from the date of signature by the last Party. It may be renewed by mutual written agreement upon written request by registered letter by the Licensee six months before the expiry date of the Agreement.

6.2 Upon appropriate justified reasons, the Licensee may terminate this Agreement by serving six months' written notice by registered letter to the other Party. This Agreement may also be terminated at any time by written mutual agreement between the Parties.

6.3 In the event of termination of this Agreement in accordance with Article 6(2) and without prejudice to any other measures provided for in the Agreement, the Licensee shall:

a) discontinue the use of the Licensee Product or any other activity covered under Article 2 and

b) take all appropriate measures to minimize costs, prevent damage, and cancel his commitments.

6.4 In the event of non-performance by the Licensee of any of his obligations arising out of this Agreement (and in particular, but not exclusively, Article 3 and 7) and irrespective of the consequences provided under the law applicable to this Agreement, the Commission may automatically terminate the Agreement without any legal formality, upon notice by registered letter to the Licensee at the address mentioned in Article 16. The consequences of such termination shall be those specified in Article 6.3(a) and 6.3(b).

ARTICLE 7 - Confidentiality obligation

7.1 The access of the European Commission and the Licensee to the Information shall be limited to the scope of the present Agreement.

All the information that shall consist of, but is limited to, the technical details, all business and manufacturing secrets and in particular research, development, production and market data as well as other business information and any other

information is communicated under strict confidence. Neither the European Commission nor the Licensee shall disclose to any third parties any confidential Information received by them.

7.2 The European Commission and the Licensee may only pass on the Information to their employees if such Information is required for evaluation. The European Commission and the Licensee must ensure that such employees having access to the Information are committed to confidentiality in the same way they have committed themselves and that they shall not divulge Information to third party even after completion of their assignment.

Licensee warrants that its employees, consultants and contractors are bound by confidentiality.

7.3 Any loss or damage, caused to one of the Parties of the present Agreement and arising out of the breach of this Article shall be borne exclusively by the Party responsible for such breach; the breaching Party shall be responsible for making compensation thereof and shall indemnify and hold harmless the other Party in respect of any such loss, damage or injury, including but not limited to reasonable attorneys fees.

ARTICLE 8 - Liability

8.1 The European Commission makes no representation as to the patentability and/or breadth of the OS SIS ICD IPRs licensed under the present Agreement. Furthermore, the European Commission makes no representation as to patents now held or which other parties in the Field of Use and the Licensed Product will hold for a particular purpose. The European Commission also makes no express or implied warranties of merchantability or fitness for a particular purpose of the OS SIS ICD IPRs. The European Commission declares that it has no knowledge of any deficiencies impairing the validity of the OS SIS ICD IPRs or of any technical defects in the inventions protected by OS SIS ICD IPRs. The European Commission assumes no liability and the Licensee shall keep it harmless in respect to any infringement of any patent or other right of third parties due to the Licensee's activities under this Agreement.

8.2 The European Commission disclaims all warranties, expressed or implied, relating to the OS SIS ICD IPRs or the use thereof by the Licensee or by third parties. The European Commission shall not be liable to any party and the Licensee shall keep it harmless for any claim, including on product liability, loss of use, interruption of business or consequential damages of any kind, including but not limited to loss of profits, loss of contracts, goodwill or anticipated savings, even if the European Commission has been advised, knew or should have known of the possibility of such damages.

8.3 The Licensee shall, at all times, hold harmless, indemnify and keep indemnified the European Space Agency (ESA) against any and all costs, claims, damages or expenses incurred by the ESA or for which the ESA may become liable with respect to any infringement of any patent or other intellectual property right of third parties due to the Licensee's activities in breach of this Agreement and for product liability or other claim relating to the Licensee Products supplied or put into use by the Licensee and all third party claims arising from the Licensee's exploitation of the OS SIS ICD IPRs and/or the manufacture, keeping, importing, use, sale, or supply of the Licensee Products.

ARTICLE 9 - Infringements by third parties

The Parties hereto shall inform each other promptly of any act of infringement, passing-off, unfair competition or the like, or suspected or threatened such act, any challenge or any allegation or complaint by a third party in relation to use or intended use of the OS SIS ICD IPRs in the Territory which are subject to this Agreement.

The European Commission shall have the possibility to decide whether or not to bring an action for infringement against the infringer. In the event the European Commission decides not to bring an action for infringement against the infringer, it shall, within one month of becoming aware of the infringement, notify the Licensee, who will be entitled to do so directly.

ARTICLE 10 - Action for infringement brought by third parties

10.1   If actions for infringement are brought against the Licensee as a result of the exploitation of the OS SIS ICD IPRs, the costs incurred for its defence and payment of damages shall be borne by the Licensee. If an action for infringement is brought against the Licensee, he shall notify the European Commission and enable it to intervene in the action. The European Commission, at its discretion, may undertake to provide the Licensee with any assistance considered to be appropriate for its defence.

10.2   This Agreement and its validity shall not be influenced by the fact that one of the licensed OS SIS ICD IPRs should finally be declared invalid.

ARTICLE 11 - Intellectual property rights

11.1   OS SIS ICD IPRs are the exclusive property of the European Union and/or ESA respectively, as indicated in Annex A.

11.2   The Licensee acknowledges the OS SIS ICD IPRs as described in Annex E1 to remain with the European Union and/or ESA and shall not acquire any intellectual property right on the OS SIS ICD IPRs under the present Agreement. During the time of the present Agreement, the Licensee shall not challenge the validity of OS SIS ICD IPRs, or support third parties in such a challenge.

ARTICLE 12 - Indemnification

12.1   Subject to Article 12(2), the Licensee shall defend at its own expense any claim, suit or proceeding brought against the Licensee, insofar as it arises from the Licensee's use of the OS SIS ICD IPRs and shall indemnify and hold the European Union harmless for all claims, damages, costs and expenses awarded to the Licensee or third parties against the European Union arising from any such claim, suit or proceeding.

12.2   In the event any claim, suit or proceeding is brought against the Licensee based on a claim that any portion of the OS SIS ICD IPRs constitutes an infringement of patent or copyright, or other intellectual property rights of any third party arising under the applicable law, the European Commission shall have the right, at its option, to assume the defence of such action. In such event, the European Commission shall pay all damages, costs and expenses finally awarded to the third parties against the Licensee but shall not be responsible for any compromise made without its consent.

The European Commission shall have, in addition to any other remedies available to it, the right to injunctive relief to enjoin breaches of this Agreement.

12.3 The Licensee shall use due diligence in order to prevent the infringement of any intellectual property rights during its marketing and distribution activities. In the event that the distribution activities of the Licensee lead to an infringement of the intellectual property rights, the Licensee shall be fully liable to the European Union for any damages resulting from such infringement.

ARTICLE 13 - Permits

The necessary steps for obtaining all permits and licences required for the implementation of this Agreement, under the laws and regulations in force at the place where the commercial activities of the Licensee are to be provided, shall be the exclusive responsibility of the Licensee.

ARTICLE 14 - Applicable Law and Arbitration

14.1 This Agreement shall be governed by and construed in accordance with Belgian law.

14.2 Any dispute, controversy or claim arising under, out of or relating to this contract and any subsequent amendments of this contract, including, without limitation, its formation, validity, binding effect, interpretation, performance, breach or termination, as well as non-contractual claims, shall be submitted to mediation in accordance with the WIPO Mediation Rules. The place of mediation shall be Brussels. The language to be used in the mediation shall be English.

If, and to the extent that, any such dispute, controversy or claim has not been settled pursuant to the mediation within 90 days of the commencement of the mediation, it shall, upon the filing of a Request for Arbitration by either Party, be referred to and finally determined by arbitration in accordance with the WIPO Expedited Arbitration Rules. Alternatively, if, before the expiration of the said period of days, either Party fails to participate or to continue to participate in the mediation, the dispute, controversy or claim shall, upon the filing of a Request for Arbitration by the other Party, be referred to and finally determined by arbitration in accordance with the WIPO Expedited Arbitration Rules. The arbitral tribunal shall consist of three arbitrators appointed by the parties. The place of arbitration shall be Brussels. The language to be used in the arbitral proceedings shall be English. The dispute, controversy or claim referred to arbitration shall be decided in accordance with the law of Belgium.

ARTICLE 15 - Miscellaneous

15.1 This Agreement, including the Annexes attached hereto, is the entire Agreement among the Parties relating to the subject matter hereof and may only be modified by a written amendment signed by the authorised representatives of each Party.

15.2 The invalidity of a provision of this Agreement is not fundamental to its performance, the validity and enforceability of the remaining provisions hereof shall not in any way be affected thereby, it shall not relieve any of the Parties of its obligations and shall not deprive any of the Parties of benefits under the remaining provisions under this Agreement.

ARTICLE 16 - Administrative provisions

16.1 Any communication with reference to the performance of this Agreement, all notifications and any relevant correspondence shall be made in writing and addressed to the following addresses:

For the EUROPEAN UNION:

For administrative matters:

> European Commission, JRC
> DirectorateA - Programmes and Stakeholder Relations
> Unit Intellectual Property and Technology Transfer
> SDME 10/53
> B-1049 Brussels
>
> To the attention of the Head of Unit

For technical matters:

> European Commission
> Directorate-General for Industry and Entrepreneurship
> Unit F2 -– EU satellite navigation programmes: infrastructure
> ………………..
> ………………..
>
> To the attention of the Head of Unit

For the LICENSEE:

> ………………..
> ………………..
> ………………..

16.2   The Agreement reference is n° JRC.BXL.EA.xxxxx-xxxx. It shall be quoted in all correspondence with the European Union.

ARTICLE 17 - Annexes

The following are appended to and are an integral part of this Agreement:

> Annex E1:   List of OS SIS ICD-related Intellectual Property Rights
>
> Annex E2:   Licensee's Development Plan

Done in Brussels,
In two originals in the
English language

For the LICENSEE   For the EUROPEAN COMMISSION

xxxxxxxxxxxxxxx   Mr Roland Schenkel
xxxxxxxxxxxxxxx   Director-General
xxxxxxxxxxxxxxx   Joint Research Centre

Annex E1 to the Agreement n° JRC.BXL.EA.xxxxx-xxxx - List of OS SIS ICD-related Intellectual Property Rights

	IPR	Name of IPR	Patent/ Trademark number	Date of filing	Date of publication	Applicant	Owner	Application number	Type of applicant	File reference	Territorial coverage
1	Patent	Multi-band antenna for satellite positioning system	WO2007006773	10/07/2006	18/01/2007	GJU	EU	PCT/EP2006/064067	International / European	P-2744	Australia Canada Norway USA S.Korea Brazil China India Japan Russia
2	Patent	Method for providing assistance data to a mobile station of a satellite positioning system	WO2007054493	07/11/2006	18/05/2007	GJU	EU	PCT/EP2006/068177	International / European	P-2745	Australia Canada Europe USA S.Korea Brazil China India Japan Russia
3	Patent	Method and generator for generating a spread-spectrum signal (initially referred to as Use of antiphase CBOC (6.1) modulation to improve ranging accuracy in satellite navigation signals)	1783509	20/04/2007	09/05/2007	GSA	EU	11738006	USA	P-2764/US	USA
4	Patent	Chaotic spreading codes and their generation	WO2008065191	30/11/2007	05/06/2008	GSA	EU	PCT/EP2007/063080	International / European	P-2784	**Not yet selected**
5	Copyright co-ownership with ESA	OS SIS ICD	NA	NA	NA	NA	EU and ESA	NA	NA	NA	Worldwide

	IPR	Name of IPR	Patent/ Trademark number	Date of filing	Date of publication	Applicant	Owner	Application number	Type of applicant	File reference	Territorial coverage
6	Patent	Spreading codes for a satellite navigation system (concerning memory codes)	WO2006063613	17/12/2004	22/06/2006	ESA	ESA	PCT/EP2004/ 014488	International	ESA/GAL/ PAT/003	Canada Europe USA Brazil China Hong Kong India Japan Russia
7	Patent	Spreading codes for a satellite navigation system (concerning secondary Codes)	WO2007003213	01/07/2005	11/01/2007	ESA	ESA	PCT/EP2005/ 007235	International	ESA/GAL/ PAT/004	Canada Europe USA Brazil China Hong Kong India Japan Russia
